

Physical & Chemical Changes

When matter changes, it can be a **physical** or **chemical** change.

Physical change means a change in color, size, or shape. A physical change is a change that can be reversed, or changed back. A change in state such as an ice cube melting to water, is a physical change. By putting the ice cube back into the freezer, the change can be **reversed** and the ice cube can be formed again. Water, ice, and water vapor are all water.

Chemical change means a change in a substance that makes it different from its original matter. A chemical change is a change that can't be reversed, or is very difficult to reverse. A chemical change occurs when a substance changes color, or when a substance gives off bubbles or gas. When we put wood on a campfire, it burns and changes to ashes, gas, soot, and smoke. This is non-reversible as we cannot change the ashes back to wood.

Look at these examples. Tell whether the change is **physical** or **chemical**.
