The War of the Soups and the Sparks Elliot S. Valenstein, 2005 The question of how nerves communicate with one another was the subject of a heated protracted dispute between pharmacologists neurophysiologists This book recalls the debate how the theory of chemical transmission was eventually confirmed by the discovery of neurotransmitters

Creating Modern Neuroscience: The Revolutionary 1950s Gordon M. Shepherd, 2010 For modern scientists history often starts with last week's journals and is regarded as largely a quaint interest compared with the advances of today However this book makes the case that measured by major advances the greatest decade in the history of brain studies was mid twentieth century especially the 1950s The first to focus on worldwide contributions in this period the book ranges through dozens of astonishing discoveries at all levels of the brain from DNA

Watson and Crick through growth factors Hamburger and Levi Montalcini excitability Hodgkin and Huxley synapses Katz and Eccles dopamine and Parkinson's Carlsson visual processing Hartline and Kuffler the cortical column Mountcastle reticular activating system Moruzzi and Magoun and REM sleep Aserinsky to stress Selye learning Hebb and memory HM and Milner The clinical fields are also covered from Cushing and Penfield psychosurgery and brain energy metabolism Kety to most of the major psychoactive drugs in use today beginning with Delay and Deniker and much more The material has been the basis for a highly successful advanced undergraduate and graduate course at Yale with the classic papers organized and accessible on the web There is interest for a wide range of readers academic and lay because there is a focus on the creative process itself on understanding how the combination of unique personalities innovative hypotheses and new methods led to the advances Insight is given into this process through describing the struggles between male and female student and mentor academic and private sector and the roles of chance and persistence The book thus provides a new multidisciplinary understanding of the revolution that created the modern field of neuroscience and set the bar for judging current and future advances

investigators of the nerve impulse went on to win or share Nobel prizes and this book not only emphasizes their work but also traces their brilliant careers For anyone interested in the nervous system and the history of neuroscience Galvani's Spark The Story of the Nerve Impulse is essential reading

From Medical Chemistry to Biochemistry Robert E. Kohler, 1982-05-31 This penetrating case study of institution building and entrepreneurship in science shows how a minor medical speciality evolved into a large and powerful academic discipline Drawing extensively on little used archival sources the author analyses in detail how biomedical science became a central part of medical training and practice The book shows how biochemistry was defined as a distinct discipline by the programmatic vision of individual biochemists and of patrons and competitors in related disciplines It shows how discipline builders used research programmes as strategies that they adapted to the opportunities offered by changing educational markets and national medical reform movements in the United States Britain and Germany The author argues that the priorities and styles of various departments and schools of biochemistry reflect systematic social relationships between that discipline and biology chemistry and medicine Science is shaped by its service roles in particular local contexts This is the central theme The author's view of the political economy of modern science will be of interest to historians and social scientists scientific and medical practitioners and anyone interested in the ecology of knowledge in scientific institutions and professions
