Evidence-based Management of Epilepsy Steven C Schachter, 2011-09-01 The clinical management of patients with epilepsy and the associated medical literature are rapidly evolving Evidence based Management of Epilepsy differs from other epilepsy textbooks by focusing specifically on topics where the available evidence is sufficiently well developed to be synthesized into straightforward summaries of proven therapies When evidence is missing or there is doubt controversy or ambiguity the distinguished authors offer treatment recommendations based on practice guidelines or consensus statements that span the gaps in evidence while pointing to those areas where further research is needed The

initial chapters cover critically important aspects of antiepileptic drugs AEDs and surgical treatment such as when to start and stop AEDs how to monitor their effectiveness special considerations in women who become pregnant and when to consider surgery to alleviate seizures The following chapters cover the therapy of seizures when they develop after traumatic brain injury or stroke and the treatment of concomitant depression and anxiety in patients with epilepsy The final chapters discuss emerging topics in epilepsy the treatment of the postictal state technologies to predict and detect seizures strategies for closing the treatment gap and sudden unexpected death in epilepsy The contributors are renowned experts in their fields who successfully and succinctly present state of the art reviews based on the medical evidence designed to help the clinician be as best informed as possible in the care of patients with epilepsy *Epilepsy: Complementary and Alternative Treatments* Sally Baxendale, 2012-06-08 Epilepsy or seizure disorder is widespread affecting more than 350 000 in the UK and an estimated three million approximately in the US While anti epileptic drugs have a major role preventing seizure activity they may not be totally effective in achieving control and there is a strong burgeoning interest in lifestyle measures and complementary therapies which may help This book is intended to be a trusted source to help people with epilepsy make sense of the treatment choices given that epilepsy is not a single condition and some treatments may work for some but not other forms of the condition Each chapter includes information about the treatment evidence whether it will work for your type of epilepsy and practical considerations **Complementary and Alternative Medicine (CAM) for Individuals with Epilepsy** April R. Detrick, 2021 Individuals with epilepsy manage the clinical manifestations of the condition primarily seizure related activity with daily use of pharmacologic agents making it one of the most common neurological conditions treated with drug therapy for symptom management Pharmacologic agents for epilepsy also known as anti epileptic drugs AEDs are commonly prescribed to treat seizures and neurologic conditions associated with epilepsy but can lead to a reduced quality of life and many unwanted side effects Complementary and alternative treatments can also provide relief from seizures associated with epilepsy The purpose of this literature review was to evaluate the effectiveness of complementary and alternative treatments compared to pharmacological treatment for individuals with epilepsy A literature review examining different alternative treatments such as physical activity medical cannabis neurostimulation and various diets and their benefits on seizure reduction seizure frequency and the quality of life was conducted from various online databases Research articles published from 2003 to 2020 that focused on the benefits of complementary and alternative therapies in controlling the clinical manifestations of epilepsy were included for synthesis Results from 10 studies that used a complementary or alternative therapy as a treatment for epilepsy alone or in combination with pharmacological therapy were compared for effectiveness on clinical manifestations Seventy percent of the studies analyzed show at least a fifty percent reduction in seizure frequency The studies suggest that complementary and alternative therapies can be effective as monotherapy or as adjuvant agents for reducing seizure frequency reducing seizure duration and improving quality of life Although benefits

were found in each study many studies were performed on animals or had small sample sizes indicating the need for further research
