

Endangered Species

There are about 8.7 million species of animals on earth but some scientists think that 40% of them might soon be gone! A species of animals is called endangered when there aren't that many of them left. If a species is endangered it means that they are in danger of becoming extinct.

Interesting Fact

There are only about 200 White Tigers left in the entire World!

Why Do Species Become Endangered?

Some species of animals become endangered because of events in nature that are beyond anyone's control. These include volcanoes erupting and long periods of extremely cold weather, like an Ice Age. Though these natural events do happen, most species become endangered because of the behavior of humans. Pollution and the overuse of pesticides have put many animal species at risk. Humans have damaged the habitats of many animal species leaving them nowhere to live or get food. Also, people have brought in species of animals and plants that do not normally live in an area. These new species can harm or kill the animals and plants that live there, making them endangered. Finally, human beings have taken animals out of their natural habitats and have put them in new ones to make room for building houses, cities, etc. When these species are forced to live somewhere different, they cannot survive.

Species - A grouping of animals that can have children together.

Extinct - A species that no longer exists.

Pesticides - Chemicals that are used to kill insects that hurt crops.

Habitat - Where a plant or animal naturally lives.

Learning and Teaching in the Chinese Classroom Shane N. Phillipson,Bick-har Lam,2011-10-01 A major concern of all education authorities around the world is the challenge that schools face in catering for learner diversity That this concern is shared by authorities in East Asia including the Education Bureau EDB of Hong Kong is surprising given the high academic achievement of students from this part of the world This book helps to meet this challenge for teachers in East Asia by focusing on specific research that helps explain the basis for diversity in the Chinese learner Although there are many textbooks that cover the basic principles of educational psychology few do not focus on the Chinese learner This book makes the link between the broad field of educational psychology and how these theories contribute to our understanding of the Chinese learner This book is unique in that it draws on recent research to illustrate the application of these theories thereby helping teachers and students in teacher education programmes understand the variability in student achievement Our book is based on the idea that the Chinese context is in many ways different to other cultural contexts and that teachers can make a difference to the outcomes of student learning We also draw on our many years of experience in educating future teachers where our students want us to focus on the Chinese classroom Our student teachers also want to be educated by professors who are themselves researchers In drawing on research about the Chinese learner we also bring to our student teachers the richness and value of educational research We also encourage our student teachers to think of themselves as professional researchers in terms of developing an understanding of the research literature and in finding solutions to their classroom problems
