**Computational Intelligence in Automotive Applications** Danil Prokhorov, 2008-05-30 This edited volume is the first of its kind and provides a representative sample of contemporary computational intelligence CI activities in the area of automotive technology All chapters contain overviews of the state of the art **Computational Intelligence in**

**Automotive Applications** Danil Prokhorov, 2008-05-28 What is computational intelligence CI Traditionally CI is understood as a collection of methods from the elds of neural networks NN fuzzy logic and evolutionary computation Various definitions and opinions exist but what belongs to CI is still being debated see e g 1 3 More recently there has been a proposal to define the CI not in terms of the tools but in terms of challenging problems to be solved 4 With this edited volume I have made an attempt to give a representative sample of contemporary CI activities in automotive applications to illustrate the state of the art While CI research and achievements in some specialized elds described see e g 5 6 this is the first volume of its kind dedicated to automotive technology As if reflecting the general lack of consensus on what constitutes the eld of CI this volume 1 illustrates automotive applications of not only neural and fuzzy computations which are considered to be the standard CI topics but also others such as decision trees graphical models Support Vector Machines SVM multi agent systems etc This book is neither an introductory text nor a comprehensive overview of all CI research in this area Hopefully as a broad and representative sample of CI activities in automotive applications it will be worth reading for both professionals and students When the details appear insufficient the reader is encouraged to consult other relevant sources provided by the chapter authors **Springer Handbook of Computational Intelligence** Janusz Kacprzyk, Witold Pedrycz, 2015-05-28 The

Springer Handbook for Computational Intelligence is the first book covering the basics the state of the art and important applications of the dynamic and rapidly expanding discipline of computational intelligence This comprehensive handbook makes readers familiar with a broad spectrum of approaches to solve various problems in science and technology Possible approaches include for example those being inspired by biology living organisms and animate systems Content is organized in seven parts foundations fuzzy logic rough sets evolutionary computation neural networks swarm intelligence and hybrid computational intelligence systems Each Part is supervised by its own Part Editor s so that high quality content as well as completeness are assured *Applied Computational Intelligence in Engineering and Information Technology* Radu-Emil Precup, Szilveszter Kovács, Stefan Preitl, Emil M. Petriu, 2012-03-22 This book highlights the potential of getting benefits from various applications of computational intelligence techniques The present book is structured such that to include a set of selected and extended papers from the 6th IEEE International Symposium on Applied Computational Intelligence and Informatics SACI 2011 held in Timisoara Romania from 19 to 21 May 2011 After a serious paper review performed by the Technical Program Committee only 116 submissions were accepted leading to a paper acceptance ratio of 65 % A further refinement was made after the symposium based also on the assessment of the presentation quality Concluding this book

includes the extended and revised versions of the very best papers of SACI 2011 and few invited papers authored by prominent specialists. The readers will benefit from gaining knowledge of the computational intelligence and on what problems can be solved in several areas they will learn what kind of approaches is advised to use in order to solve these problems. A very important benefit for the readers is an understanding of what the major difficulties are and the cost effective solutions to deal with them. This book will offer a convenient entry for researchers and engineers who intend to work in the important fields of computational intelligence.

*Computational Intelligence for Remote Sensing* Manuel Grana, Richard J. Duro, 2008-06-05 This book is a composition of different points of view regarding the application of Computational Intelligence techniques and methods to Remote Sensing data and applications. It is the general consensus that classification, its related data processing and global optimization methods are core topics of Computational Intelligence. Much of the content of the book is devoted to image segmentation and recognition using diverse tools from different areas of the Computational Intelligence field ranging from Artificial Neural Networks to Markov Random Field modeling. The book covers a broad range of topics starting from the hardware design of hyperspectral sensors and data handling problems namely data compression and watermarking issues as well as autonomous web services. The main contents of the book are devoted to image analysis and efficient parallel implementations of these analysis techniques. The classes of images dealt with throughout the book are mostly multispectral hyperspectral images though there are some instances of processing Synthetic Aperture Radar images.

Advances in Computational Intelligence in Transport, Logistics, and Supply Chain Management Andreas Fink, Franz Rothlauf, 2008-09-08 Logistics and supply chain management deal with managing the flow of goods or services within a company from suppliers to customers and along a supply chain where companies act as suppliers as well as customers. As transportation is at the heart of logistics the design of traffic and transportation networks combined with the routing of vehicles and goods on the networks are important and demanding planning tasks. The influence of transport logistics and supply chain management on the modern economy and society has been growing steadily over the last few decades. The worldwide division of labor, the concentration of distributed production centers and the increased mobility of individuals lead to an increased demand for efficient solutions to logistics and supply chain management problems. On the company level efficient and effective logistics and supply chain management are of critical importance for a company's success and its competitive advantage. Proper performance of the logistics functions can contribute both to lower costs and to enhanced customer service. Computational Intelligence (CI) describes a set of methods and tools that often mimic biological or physical principles to solve problems that have been difficult to solve by classical mathematics. CI embodies neural networks, fuzzy logic, evolutionary computation, local search and machine learning approaches. Researchers that work in this area often come from computer science, operations research or mathematics as well as from many different engineering disciplines. Popular and successful CI methods for optimization and planning problems are heuristic optimization approaches such as

evolutionary algorithms local search methods and other types of guided search methods      Dependability Modelling under Uncertainty Philipp Limbourg, 2008-08-20 Mechatronic design processes have become shorter and more parallelized induced by growing time to market pressure Methods that enable quantitative analysis in early design stages are required should dependability analyses aim to influence the design Due to the limited amount of data in this phase the level of uncertainty is high and explicit modeling of these uncertainties becomes necessary This work introduces new uncertainty preserving dependability methods for early design stages These include the propagation of uncertainty through dependability models the activation of data from similar components for analyses and the integration of uncertain dependability predictions into an optimization framework It is shown that Dempster Shafer theory can be an alternative to probability theory in early design stage dependability predictions Expert estimates can be represented input uncertainty is propagated through the system and prediction uncertainty can be measured and interpreted The resulting coherent methodology can be applied to represent the uncertainty in dependability models      Self-Adaptive Heuristics for Evolutionary Computation Oliver Kramer, 2008-10-10 Evolutionary algorithms are successful biologically inspired meta heuristics Their success depends on adequate parameter settings The question arises how can evolutionary algorithms learn parameters automatically during the optimization Evolution strategies gave an answer decades ago self adaptation Their self adaptive mutation control turned out to be exceptionally successful But nevertheless self adaptation has not achieved the attention it deserves This book introduces various types of self adaptive parameters for evolutionary computation Biased mutation for evolution strategies is useful for constrained search spaces Self adaptive inversion mutation accelerates the search on combinatorial TSP like problems After the analysis of self adaptive crossover operators the book concentrates on premature convergence of self adaptive mutation control at the constraint boundary Besides extensive experiments statistical tests and some theoretical investigations enrich the analysis of the proposed concepts      *Recent Advances in Evolutionary Computation for Combinatorial Optimization* Carlos Cotta, Jano van Hemert, 2008-09-08 Combinatorial optimisation is a ubiquitous discipline whose usefulness spans vast applications domains The intrinsic complexity of most combinatorial optimisation problems makes classical methods unaffordable in many cases To acquire practical solutions to these problems requires the use of metaheuristic approaches that trade completeness for pragmatic effectiveness Such approaches are able to provide optimal or quasi optimal solutions to a plethora of difficult combinatorial optimisation problems The application of metaheuristics to combinatorial optimisation is an active field in which new theoretical developments new algorithmic models and new application areas are continuously emerging This volume presents recent advances in the area of metaheuristic combinatorial optimisation with a special focus on evolutionary computation methods Moreover it addresses local search methods and hybrid approaches In this sense the book includes cutting edge theoretical methodological algorithmic and applied developments in the field from respected experts and with a sound perspective      *Adaptive and Multilevel Metaheuristics* Carlos Cotta, Marc Sevaux, Kenneth

Sörensen, 2008-06-17 One of the keystones in practical metaheuristic problem solving is the fact that tuning the optimization technique to the problem under consideration is crucial for achieving top performance. This tuning/customization is usually in the hands of the algorithm designer and despite some methodological attempts it largely remains a scientific art. Transferring a part of this customization effort to the algorithm itself, endowing it with smart mechanisms to self-adapt to the problem, has been a long-pursued goal in the field of metaheuristics. These mechanisms can involve different aspects of the algorithm such as, for example, self-adjusting the parameters, self-adapting the functioning of internal components, evolving search strategies, etc. Recently, the idea of hyperheuristics, i.e. using a metaheuristic layer for adapting the search by selectively using different low-level heuristics, has also been gaining popularity. This volume presents recent advances in the area of adaptiveness in metaheuristic optimization, including up-to-date reviews of hyperheuristics and self-adaptation in evolutionary algorithms, as well as cutting-edge works on adaptive, self-adaptive, and multilevel metaheuristics with application to both combinatorial and continuous optimization.
