QUESTIONSHEET 1

Calcium carbonate reacts with dilute hydrochloric acid to produce the gas carbon dioxide.

The table below gives the results from a reaction when 40 cm³ dilute hydrochloric acid was added to one marble chip (calcium carbonate) at room temperature of 20°C. The calcium carbonate was in excess.

One of the results in the table is unreliable.

Mass of flask and contents (g)	71.00	70.74	70.54	70.40	70.30	70.24	70.26	70.20	70.20	70.20
Time (min)	0	1	2	3	4	5	6	7	8	9

- (i) On the grid below plot a graph of the results shown in the table above.

Draw a smooth curve through the reliable points and label it A.

Chemactive Rates Of Reaction:

Rates and Mechanisms of Chemical Reactions W. C. Gardiner (Jr.), 1969 *Theories of Chemical Reaction Rates*
Keith James Laidler, 1979 **Chemical Abstracts**, 1914 Chemical Kinetics and Mechanism M Mortimer, P G
Taylor, 2007-10-31 *Chemical Kinetics and Mechanism* considers the role of rate of reaction It begins by introducing chemical kinetics and the analysis of reaction mechanism from basic well established concepts to leading edge research Organic reaction mechanisms are then discussed encompassing curly arrows nucleophilic substitution and E1 and E2 elimination reactions The book concludes with a Case Study on Zeolites which examines their structure and internal dimensions in relation to their behaviour as molecular sieves and catalysts The accompanying CD ROM contains the Kinetics Toolkit a graph plotting application designed for manipulation and analysis of kinetic data which is built into many of the examples questions and exercises in the text There are also interactive activities illustrating reaction mechanisms The Molecular World series provides an integrated introduction to all branches of chemistry for both students wishing to specialise and those wishing to gain a broad understanding of chemistry and its relevance to the everyday world and to other areas of science The books with their Case Studies and accompanying multi media interactive CD ROMs will also provide valuable resource material for teachers and lecturers The CD ROMs are designed for use on a PC running Windows 95 98 ME or 2000

Chemical Abstracts, 1991 Reaction Rate Theory and Rare Events Baron Peters, 2017-03-22 *Reaction Rate Theory and Rare Events* bridges the historical gap between these subjects because the increasingly multidisciplinary nature of scientific research often requires an understanding of both reaction rate theory and the theory of other rare events The book discusses collision theory transition state theory RRKM theory catalysis diffusion limited kinetics mean first passage times Kramers theory Grote Hynes theory transition path theory non adiabatic reactions electron transfer and topics from reaction network analysis It is an essential reference for students professors and scientists who use reaction rate theory or the theory of rare events In addition the book discusses transition state search algorithms tunneling corrections transmission coefficients microkinetic models kinetic Monte Carlo transition path sampling and importance sampling methods The unified treatment in this book explains why chemical reactions and other rare events while having many common theoretical foundations often require very different computational modeling strategies Offers an integrated approach to all simulation theories and reaction network analysis a unique approach not found elsewhere Gives algorithms in pseudocode for using molecular simulation and computational chemistry methods in studies of rare events Uses graphics and explicit examples to explain concepts Includes problem sets developed and tested in a course range from pen and paper theoretical problems to computational exercises

Chemical Kinetics Kenneth Antonio Connors, 1990 *Chemical Kinetics The Study of Reaction Rates in Solution* Kenneth A Connors This chemical kinetics book blends physical theory phenomenology and empiricism to provide a guide to the experimental practice and interpretation of reaction kinetics in solution It is suitable for courses in

chemical kinetics at the graduate and advanced undergraduate levels This book will appeal to students in physical organic chemistry physical inorganic chemistry biophysical chemistry biochemistry pharmaceutical chemistry and water chemistry all fields concerned with the rates of chemical reactions in the solution phase Chemical Kinetics Noel Roderick Waite,1971
