**Chemical Modification of Enzymes** Jaime Eyzaguirre, 1987 **Lectins and Glycobiology** Hans-Joachim Gabius, Sigrun Gabius, 2012-12-06 The intriguing complexity precision and regulation of the wide range of biological processes is determined by intricate mechanisms of molecular recognition Their nature is under intense scrutiny In addition to the well appreciated interaction of proteins either with amino acid or nucleotide sequences the investigation of their interplay with carbohydrate elements of cellular glycoconjugates currently exerts increasing attraction In the group of carbohydrate binding proteins lectins are distinguished from antibodies or ligand affecting enzymes according to the most recent definition The thorough analysis of their structure and function is considered as a focus to collect a critical mass of information for delineating details of a further array of biochemical processes with pivotal physiological impact Following an

already century long history of scientific description reflected by subjectively chosen highlights see the Brief History of Lectin Research at page VI the excitement in glycobiological research that prevails today can easily be explained by our growing awareness of the multifarious significance of a sugar code system of biological information This present notion unmistakably has an impact on lines of research in diverse disciplines like cell and molecular biology histochemistry or clinical sciences It also prompts inherent practical questions such as how to obtain lectins or how to employ them as instruments in various assay systems with the best possible results Thus this book is devoted intentionally to cover the techniques in different research fields that deal with lectins

Rickey Y. Yada, R.L. Jackman, 2012-12-06 Food proteins constitute a diverse and complex collection of biological macromolecules Although contributing to the nutritional quality of the foods we consume proteins also act as integral components by virtue of their diverse functional properties The expression of these functional properties during the preparation processing and storage of foods is largely dictated by changes to the structure or structure related properties of the proteins involved Therefore germane to the optimal use of existing and future food protein sources is a thorough understanding of the nature of the relationships between structure and function It is the goal of this book to aid in better defining these relationships Two distinct sections are apparent firstly those chapters which address structure function relationships using a variety of food systems as examples to demonstrate the intricacies of this relationship and secondly those chapters which discuss techniques used to either examine structural parameters or aid in establishing quantitative relationships between protein structure and function The editors would like to thank all contributors for their assistance cooperation and above all their patience in putting this volume together and the following companies organizations for their financial support without which it would not have been the success it was Ault Foods Limited Best Foods Canada Limited Natural Sciences and Engineering Research Council of Canada Ontario Ministry of Agriculture and Food Quest International Canada Inc and University of Guelph R Y Y R LJ
