Chemical Weapons Destruction And Explosive Waste Unexploded Ordnance Remediations:

Chemical Weapons Destruction and Explosive Waste Robert Noyes, 1996-12-31 Some of the more difficult environmental problems facing the Department of Defense DOD include 1 chemical weapons destruction 2 explosive waste remediation and 3 unexploded ordnance clearance and extraction It is conceivable that 50 to 100 billion will be spent by DOD for these three programs offering unusual opportunities for environmental engineering and related firms Military installations are similar to small cities in terms of population industrial activities and some types of contaminated sites However some cover an area larger than a small state DOD has operated industrial facilities on its installations for several decades that have generated stored recycled or disposed of hazardous wastes Many of these activities have contaminated the nearby soil and groundwater To study and clean up contaminated sites DOD established the Installation Restoration Program IRP in 1975 In 1984 the IRP was made part of the Defense Environmental Restoration Program The Secretary of Defense delegated cleanup responsibility to the Army Navy the Air Force and the Defense Logistics Agency DLA Cleanup actions are usually accomplished under contract with private firms which are monitored by the services Most cleanup actions are funded through the Defense Environmental Restoration Account DERA and the Base Realignment and Closure Account Congress established DERA in 1984 to fund the cleanup of inactive contaminated sites on DOD installations The technology to clean up the conventional hazardous wastes on DOD sites are the same as those utilized for industrial sites and well documented by this publisher However there are three DOD programs that require the utilization of somewhat unusual or different technologies that have not been as well documented These three programs are 1 Chemical weapons destruction 2 Remediation of explosives contaminated soils and lagoons 3 Unexploded ordnance detection clearance and extraction This book discusses the current and potential treatment technologies involved in these three programs Cleanup of Chemical and Explosive Munitions Richard Albright, 2011-12-13 Part I The Cleanup of Chemical and Explosive Munitions Part II Case Study The American University Experiment Station AUES A Formerly Used Defense Site Appendices Bibliography
