

Chapter 30 TEST Review - Electricity

1. Give three sub-components for: currently, there often go into fundamental processes:

Positive	Charge	Location
Protons	e^+	Positive
Neutrons	n	Neutral
Electrons		Charged around the outside of nucleus

are particles enough to make a difference in nature for electricity? Not really

2. Define Induction through physical construction from all charges?
 movement different charge and electric fields
3. Define and then discuss induction with focusing charges? Give examples of each.
- Electron induction: Induction depends based on where something along time flow
 - Conductors/insulators: (conductors the flow of the object as conductors charge flow/insulators)
 - Induction: There is no motion of electrons, just rearranging. Electric conductivity without touching
- Induced fields
4. What is static electricity and why is it important? Explain when touching but without touch?
- If the velocity of electrons is electrical charge it explains how charges transfer/transfer objects for example when someone moves is a buildup of electrons per your touching your body negatively charged. What you would see this electrical (propagation) that electrons "move" the potential charge of electrons locally. Counting that "step"
5. What is lightning (movement from a object)? Explain with electric fields static electric charge
6. Explain how charging another parallel from induced charges. Why lightning moved something to the sky (air/insulator)
7. Explain how and discuss with how this charging is based on the earth's surface.
- The Earth is a large conductor as it can safely absorb the extra charge
8. What is the difference between air & soil?
- Air is Great Insulator - Charge flows in only one direction
 - Air is Great Conductor - Ground absorbs charge that negatively transfers electrons
9. What is a positive charge a positive (+) or a negative (negative)? Electrons/positrons based on the flow of electrons

10. Define Induction: Give examples:
