Transforming University Biochemistry Teaching Using Collaborative Learning and Technology Penny J.

Gilmer,2010-03-10 One aim of Gilmer's captivating text on university pedagogy is to show that biochemistry or any science does not consist solely of facts to be learned but is a way of thinking about the world. Her purpose both in this book and in her classroom is to make her students into critical thinkers rather than passive learners. The chapters cast a critical eye over research into enhanced education techniques such as collaborative learning. Gilmer describes the action research she conducted in her own biochemistry undergraduate classroom into ways of improving the learning environment. She offers various perspectives on the make up of her classroom including an analysis of ethnographic data. The tools Gilmer employs as she hones her teaching skills include collaborative learning and technology. She views the classroom through various theoretical perspectives: social constructivism, cultural historical activity theory, and a theory that involves the dialectic between the structure of the learning environment and the agency of the learners, a group among whom she includes herself. She provides a wealth of autobiographical detail as well as the results of her action research which followed up on its original subjects after an interval of 11 years to see what impact her course had on their professional growth. Above all, this volume is proof of what can be achieved in education when teachers are as interested in the process of learning as they are in their subject itself.

Environmental Chemistry in the Lab Ruth Ann Murphy,2022-08-31 Environmental Chemistry in the Lab presents a comprehensive approach to modern environmental chemistry laboratory instruction together with a complete experimental experience. The laboratory experiments have an introduction for the students to read, a pre-lab for them to complete before coming to the lab, a data sheet to complete during the lab, and a post-lab which would give them an opportunity to reinforce their understanding of the experiment completed. Instructor resources include a list of all equipment and supplies needed for 24 students, a lab preparation guide, an answer key to all pre-lab and post-lab questions, sample data for remote learners, and a suggested rubric for grading the labs. Additional features include Tested laboratory exercises with instructor resources for environmental science students, Environmental calculations, industrial regulation and environmental stewardship Classroom and remote exercises. An excellent user-friendly and thought-provoking presentation which will appeal to students with little or no science background. A qualitative approach to the chemistry behind many of our environmental issues today.

Forensics in Chemistry Sara McCubbins,Angela Codron,2012 Forensics seems to have the unique ability to maintain student interest and promote content learning. I still have students approach me from past years and ask about the forensics case and specific characters from the story. I have never had a student come back to me and comment on that unit with the multiple choice test at the end from the Introduction to Forensics in Chemistry. The Murder of Kirsten K: How did Kirsten K's body wind up at the bottom of a lake and what do wedding cake ingredients, soil samples, radioactive decay, bone age, blood stains, bullet matching, and drug lab evidence reveal about whodunit? These mysteries are at

the core of this teacher resource book which meets the unique needs of high school chemistry classes in a highly memorable way The book makes forensic evidence the foundation of a series of eight hands on week long labs As you weave the labs throughout the year and students solve the case the narrative provides vivid lessons in why chemistry concepts are relevant and how they connect All chapters include case information specific to each performance assessment and highlight the related national standards and chemistry content Chapters provide Teacher guides to help you set up Student performance assessments A suspect file to introduce the characters and new information about their relationships to the case Samples of student work that has been previously assessed and that serves as an answer key for you Grading rubrics Using Forensics in Chemistry as your guide you will gain the confidence to use inquiry based strategies and performance based assessments with a complex chemistry curriculum Your students may gain an interest in chemistry that rivals their fascination with Bones and CSI
