## Tips

- Take at least two views of each anatomic region—remember, you're capturing a three-dimensional object.
- Center the x-ray beam directly over the area of interest.
- Visualize how the image would look on a monitor. Move the patient and position the area of interest along the long axis of your collimated field, rather than rotating the extremity.

- Collimate to the area of interest to reduce scatter radiation and improve image quality.
- Be safer—always use protective lead gloves, aprons, and thyroid shields to protect yourself from scatter radiation; stay as far away as possible from the primary x-ray beam; and use positioning devices.
- Use a well-defined system of exposure determination, such as a technique chart based on patient characteristics, for accurate, repeatable, and optimal exposures. Include laterality markers.

## Thorax

### Lateral thorax

Scapulum and thoracic spine must both be in same plane. Extend thoracic extremity fully. Extend front limbs, but do not rotate patient. If lateral collimation available, top of last rib. Always exposure at peak inspiration.

## Abdomen

### Lateral abdomen

Position animal as for lateral thorax, but center on middle of last rib. Exception: For cats and brachycephals, center 1 inch past last rib.

## Key

- CT Anesthesia required
- CT Anesthesia or heavy sedation suggested

## Skull

### Lateral skull CT

### Dorsocentral skull CT

### Buccal, open mouth CT

### Temporomandibular oblique CT

### Ventrodorsal maxilla, open mouth CT

Skull is opened, with hard palate against table surface. Pull mandible caudally and ventrally to secure anteroposterior full and tongue to center of mandible or pull the full and tongue caudally to one side of the mandible. Angle x-ray beam 30° from perpendicular (if possible).

### Frontal sinus view CT

Position hard palate perpendicular to table surface with maxilla pointing straight up.

### Buccal/other oblique CT

Rotate the mandible up or down depending on the area of interest. The larger image depicts positioning for buccal and mandible. The smaller image indicates positioning for buccal bone and maxilla.

## Spine

### Lateral cervical spine CT

### Lateral thoracic spine CT

### Ventrodorsal cervical spine CT

### Lateral lumbar spine CT

## Pelvis and hind limbs

### Ventrodorsal pelvis CT

Dorsoplantar tarsus

Caudocranial stifle

Lateral stifle

Lateral tarsus

Oblique lateral digits

## Shoulder and front limbs

### Lateral shoulder CT

Joint to be imaged must be down and extended cranially and ventrally.

Full respiratory limb caudally and ventrally just over the back.

Clark's Positioning in Radiography 13E A. Stewart Whitley, Gail Jefferson, Ken Holmes, Charles Sloane, Craig

Anderson, Graham Hoadley, 2015-07-28 First published in 1939 Clark's Positioning in Radiography is the preeminent text on positioning technique for diagnostic radiographers. Whilst retaining the clear and easy-to-follow structure of the previous edition, the thirteenth edition includes a number of changes and innovations in radiographic technique. The text has been extensively updated.

*Textbook of Radiographic Positioning and Related Anatomy - E-Book* Kenneth L. Bontrager, John Lampignano, 2013-08-07 Focusing on one projection per page, Textbook of Radiographic Positioning and Related Anatomy 8th Edition includes all of the positioning and projection information you need to know in a clear, bulleted format. Positioning photos, radiographs, and anatomical images, along with projection and positioning information, help you visualize anatomy and produce the most accurate images. With over 200 of the most commonly requested projections, this text includes all of the essential information for clinical practice. Lists and definitions of the most common pathologies likely to be encountered during specific procedures help you understand the whole patient and produce radiographs that will make diagnosis easier for the physician. Labeled radiographs identify key radiographic anatomy and landmarks to help you determine if you have captured the correct diagnostic information on your images. Evaluation Criteria for each projection provide standards for evaluating the quality of each radiograph and help you produce the highest quality images. Clinical Indications sections explain why a projection is needed or what pathology is demonstrated to give you a better understanding of the reasoning behind each projection. Increased emphasis on digital radiography keeps you up to date with the most recent advances in technology. Completely updated content offers expanded coverage of important concepts such as digital imaging systems, updated CT information, and AART exam requirements. More CT procedures with related sectional images, especially for areas such as skull and facial bones, reflect the shift in the field from conventional radiography to CT. Updated art visually demonstrates the latest concepts and procedures with approximately 500 new positioning photos and 150 updated radiographic images. Additional critique images provide valuable experience analyzing images to prepare you to evaluate your own images in the practice environment. Updated Technique and Dose boxes reflect the higher kV now recommended for computed and digital radiography. Imaging Wisely program information from ASRT provides protocols to minimize radiation exposure during digital procedures. The latest standards for computed radiography and digital radiography CR/DR from the American Association of Physicists in Medicine ensure you are current with today's procedures and modalities.
