Dimension Theory (PMS-4), Volume 4 Witold Hurewicz, Henry Wallman, 2015-12-08 Annotation The description for this book Dimension Theory PMS 4 will be forthcoming The Unconscious as Space Anca Carrington, 2024-06-03 The Unconscious as Space explores the experience of being and the practice of psychoanalysis by thinking of the unconscious in mathematical terms Anca Carrington introduces mathematical models of space from dimension theory to algebraic topology and knot theory and considers their immediate psychoanalytic relevance The hypothesis that the unconscious is structured like a space marked by impossibility is then examined Carrington considers the clinical implications with particular focus on the interplay between language and the unconscious as related topological spaces in which movement takes place along knot like pathways The Unconscious as Space will be of appeal to psychotherapists psychoanalysts and mental health professionals in practice and in training **The Study of Physics from Phase Transitions to Living Matter** Isabel M. Irurzun, Leopoldo Garavaglia, 2023-05-15 This book is aimed at advanced university students of physics and related disciplines It reflects the evolution of a research area that receives contributions from numerous disciplines such as physics mathematics chemistry and biology among others It establishes a path from the study of phase transitions to the current understanding of the behaviour of living matter through exploring experimental and theoretical concepts surrounding crystallography physicochemistry of surfaces magnetic systems liquid crystals polymers statistical mechanics superconductivity and superfluidity growth of interfaces fractals non linear systems chaos and self organization *Etale Cohomology (PMS-33)* J. S. Milne, 1980-04-21 One of the most important mathematical achievements of the past several decades has been A Grothendieck's work on algebraic geometry In the early 1960s he and M Artin introduced tale cohomology in order to extend the methods of sheaf theoretic cohomology from complex varieties to more general schemes This work found many applications not only in algebraic geometry but also in several different branches of number theory and in the representation theory of finite and p adic groups Yet until now the work has been available only in the original massive and difficult papers In order to provide an accessible introduction to tale cohomology J S Milne offers this more elementary account covering the essential features of the theory The author begins with a review of the basic properties of flat and tale morphisms and of the algebraic fundamental group The next two chapters concern the basic theory of tale sheaves and elementary tale cohomology and are followed by an application of the cohomology to the study of the Brauer group After a detailed analysis of the cohomology of curves and surfaces Professor Milne proves the fundamental theorems in tale cohomology those of base change purity Poincar duality and the Lefschetz trace formula He then applies these theorems to show the rationality of some very general L series Originally published in 1980 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in

durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

4-Manifolds Selman Akbulut, 2016-09-22 This book presents the topology of smooth 4 manifolds in an intuitive self contained way developed over a number of years by Professor Akbulut The text is aimed at graduate students and focuses on the teaching and learning of the subject giving a direct approach to constructions and theorems which are supplemented by exercises to help the reader work through the details not covered in the proofs The book contains a hundred colour illustrations to demonstrate the ideas rather than providing long winded and potentially unclear explanations Key results have been selected that relate to the material discussed and the author has provided examples of how to analyse them with the techniques developed in earlier chapters *The Large N Expansion In Quantum Field Theory And Statistical Physics* Edouard Brezin, Spenta R Wadia, 1993-08-31 This book contains an edited comprehensive collection of reprints on the subject of the large N limit as applied to a wide spectrum of problems in quantum field theory and statistical mechanics The topics include 1 Spin Systems 2 Large N Limit of Gauge Theories 3 Two Dimensional QCD 4 Exact Results on Planar Perturbation Series and the Nature of the 1/N Series 5 Schwinger Dyson Equations Approach 6 QCD Phenomenological Lagrangians and the Large N Limit 7 Other Approaches to Large N Eguchi Kawai Model Collective Fields and Numerical Methods 8 Matrix Models 9 Two Dimensional Gravity and String Theory *The Publishers' Trade List Annual*, 1981 **Mathematical Reviews**, 2007 **Innovations in Multivariate Statistical Modeling** Andriëtte Bekker, Johannes T. Ferreira, Mohammad Arashi, Ding-Geng Chen, 2022-12-15 Multivariate statistical analysis has undergone a rich and varied evolution during the latter half of the 20th century Academics and practitioners have produced much literature with diverse interests and with varying multidisciplinary knowledge on different topics within the multivariate domain Due to multivariate algebra being of sustained interest and being a continuously developing field its appeal breaches laterally across multiple disciplines to act as a catalyst for contemporary advances with its core inferential genesis remaining in that of statistics It is exactly this varied evolution caused by an influx in data production diffusion and understanding in scientific fields that has blurred many lines between disciplines The cross pollination between statistics and biology engineering medical science computer science and even art has accelerated the vast amount of questions that statistical methodology has to answer and report on These questions are often multivariate in nature hoping to elucidate uncertainty on more than one aspect at the same time and it is here where statistical thinking merges mathematical design with real life interpretation for understanding this uncertainty Statistical advances benefit from these algebraic inventions and expansions in the multivariate paradigm This contributed volume aims to usher novel research emanating from a multivariate statistical foundation into the spotlight with particular significance in multidisciplinary settings The overarching spirit of this volume is to highlight current trends stimulate a focus on and connect multidisciplinary dots from and within multivariate statistical analysis Guided by these thoughts a collection

of research at the forefront of multivariate statistical thinking is presented here which has been authored by globally recognized subject matter experts Geometry, Analysis and Probability Jean-Benoît Bost, Helmut Hofer, François Labourie, Yves Le Jan, Xiaonan Ma, Weiping Zhang, 2017-04-26 This volume presents original research articles and extended surveys related to the mathematical interest and work of Jean Michel Bismut His outstanding contributions to probability theory and global analysis on manifolds have had a profound impact on several branches of mathematics in the areas of control theory mathematical physics and arithmetic geometry Contributions by K Behrend N Bergeron S K Donaldson J Dubdat B Duplantier G Faltings E Getzler G Kings R Mazzeo J Millson C Moeglin W Müller R Rhodes D Rössler S Sheffield A Teleman G Tian K I Yoshikawa H Weiss W Werner The collection is a valuable resource for graduate students and researchers in these fields
