Complex Ball Quotients And Line Arrangements In The Projective Plane Mathematical Notes:

Complex Ball Quotients and Line Arrangements in the Projective Plane (MN-51) Paula Tretkoff, 2016-02-16 This book introduces the theory of complex surfaces through a comprehensive look at finite covers of the projective plane branched along line arrangements Paula Tretkoff emphasizes those finite covers that are free quotients of the complex two dimensional ball Tretkoff also includes background on the classical Gauss hypergeometric function of one variable and a chapter on the Appell two variable F_1 hypergeometric function The material in this book began as a set of lecture notes taken by Tretkoff of a course given by Friedrich Hirzebruch at ETH Zurich in 1996 The lecture notes were then considerably expanded by Hirzebruch and Tretkoff over a number of years In this book Tretkoff has expanded those notes even further still stressing examples offered by finite covers of line arrangements The book is largely self contained and foundational material is introduced and explained as needed but not treated in full detail References to omitted material are provided for interested readers Aimed at graduate students and researchers this is an accessible account of a highly informative area of complex geometry

Point-Counting and the Zilber-Pink Conjecture Jonathan Pila, 2022-06-09 Point counting results for sets in real Euclidean space have found remarkable applications to diophantine geometry enabling significant progress on the Andrzej Oort and Zilber Pink conjectures The results combine ideas close to transcendence theory with the strong tameness properties of sets that are definable in an o-minimal structure and thus the material treated connects ideas in model theory transcendence theory and arithmetic This book describes the counting results and their applications along with their model theoretic and transcendence connections Core results are presented in detail to demonstrate the flexibility of the method while wider developments are described in order to illustrate the breadth of the diophantine conjectures and to highlight key arithmetical ingredients The underlying ideas are elementary and most of the book can be read with only a basic familiarity with number theory and complex algebraic geometry It serves as an introduction for postgraduate students and researchers to the main ideas results problems and themes of current research in this area

Combinatorial Structures in Algebra and Geometry Dumitru I. Stamate, Tomasz Szemberg, 2020-09-01 This proceedings volume presents selected peer reviewed contributions from the 26th National School on Algebra which was held in Constanta Romania on August 26 September 1 2018 The works cover three fields of mathematics algebra geometry and discrete mathematics discussing the latest developments in the theory of monomial ideals algebras of graphs and local positivity of line bundles Whereas interactions between algebra and geometry go back at least to Hilbert the ties to combinatorics are much more recent and are subject of immense interest at the forefront of contemporary mathematics research Transplanting methods between different branches of mathematics has proved very fruitful in the past for example the application of fixed point theorems in topology to solving nonlinear differential equations in analysis Similarly combinatorial structures e.g. Newton Okounkov bodies have led to significant advances in our understanding of the asymptotic properties of line bundles in geometry and multiplier ideals in

algebra This book is intended for advanced graduate students young scientists and established researchers with an interest in the overlaps between different fields of mathematics A volume for the 24th edition of this conference was previously published with Springer under the title Multigraded Algebra and Applications ISBN 978 3 319 90493 1 **Mathematical Reviews** ,2008 **The Compact Edition of the Oxford English Dictionary** Sir James Augustus Henry Murray,1971
