Computers and Informatics in Developing Countries *Computers and Informatics in Developing Countries* Mohan Munasinghe, 2014-05-20
Computers and Informatics in Developing Countries is a collection of papers documenting the conference of the Expert Group on Computers and Informatics for Development which investigates how the international scientific and development community can assist developing countries in using computer and informatics technology to promote progress and growth. The papers address the need for developing countries to formulate and apply computer and informatics policies for development as well as the role of an International Centre for Computers and Informatics (ICCI) should play in the development process. The ICCI should be based on the network principle that links other regional and national computer centers. The advantages of the network principle are lower startup costs, avoidance of setting up a large organization, and localized services of needs. An international organization similar to ICCI can accelerate Third World developmental efforts following the identification of needs of developing countries as regards computer and informatics, setting of clear objectives of ICCI and meeting with potential donors. The collection is suitable for heads of both non-government agencies and government departments involved in international aid, education or development, and also to administrators of educational institutions and philanthropic organizations. *Computers and Informatics in Developing Countries* D.B. ISO Standards for Computer Graphics: The First Generation discusses the expected standards in the quality of computer graphics, the aspects and examples of said standards, and the materials from the standards being described. The book is divided into six parts. Part 1 covers topics such as the applicability of first generation ISO standards, software architecture, application program interface, device interface, metafile, archive, and language binding standards, and the ISO and its related bodies. Part 2 deals with topics such as output primitives and attributes, coordinate systems, and storage mechanisms. The third part talks about language bindings, encodings, and formal specifications. The fourth part tackles validation and testing, conformance testing of graphic standards, and the registration of graphical items. The book also discusses the status and future direction of ISO standards for computer graphics; it also presents in the last part the bibliography of the included topics, glossary on related bodies, and the formal specification of a part of GKS. The text is recommended for computer engineers, IT experts, and graphic designers who would like to know the ISO standards for computer graphics and its implications in their practice. **Information Technology Management in Developing Countries** Dadashzadeh, Mohammad, 2001-07-01
The IT revolution has affected the entire world by producing a new Internet based digital economy. The challenges faced by developing countries in harnessing the full potential of IT are not really very different from those that confronted the U.S. in its journey toward the Internet economy. *Information Technology Management in Developing Countries* discusses the possible pitfalls and triumphs involved when implementing this entity.
