[Synesthesia](#) Richard E. Cytowic, 2018-03-09 An accessible concise primer on the neurological trait of synesthesia vividly felt sensory couplings by a founder of the field One in twenty three people carry the genes for the synesthesia Not a disorder but a neurological trait like perfect pitch synesthesia creates vividly felt cross sensory couplings A synesthete might hear a voice and at the same time see it as a color or shape taste its distinctive flavor or feel it as a physical touch In this volume in the MIT Press Essential Knowledge series Richard Cytowic the expert who returned synesthesia to mainstream science after decades of oblivion offers a concise accessible primer on this fascinating human experience Cytowic explains that synesthesia s most frequent manifestation is seeing days of the week as colored followed by sensing letters numerals and

punctuation marks in different hues even when printed in black Other manifestations include tasting food in shapes seeing music in moving colors and mapping numbers and other sequences spatially One synesthete declares Chocolate smells pink and sparkly another invents a dish chicken vanilla ice cream and orange juice concentrate that tastes intensely blue Cytowic who in the 1980s revived scientific interest in synesthesia sees it now understood as a spectrum an umbrella term that covers five clusters of outwardly felt couplings that can occur via several pathways Yet synesthetic or not each brain uniquely filters what it perceives Cytowic reminds us that each individual's perspective on the world is thoroughly subjective

Protecting National Security Phil Glover, 2021-07-27 This book contends that modern concerns surrounding the UK State's investigation of communications and more recently data whether at rest or in transit are in fact nothing new It evidences how whether using common law the Royal Prerogative or statutes to provide a lawful basis for a state practice traceable to at least 1324 the underlying policy rationale has always been that first publicly articulated in Cromwell's initial Postage Act 1657 namely the protection of British national security broadly construed It further illustrates how developments in communications technology led to Executive assumptions of relevant investigatory powers administered in conditions of relative secrecy In demonstrating the key role played throughout history by communications service providers the book also charts how the evolution of the UK Intelligence Community entry into the UKUSA communications intelligence sharing agreement 1946 and intelligence community advocacy all significantly influenced the era of arguably disingenuous statutory governance of communications investigation between 1984 and 2016 The book illustrates how the 2013 Intelligence Shock triggered by publication of Edward Snowden's unauthorized disclosures impelled a transition from Executive secrecy and statutory disingenuousness to a more consultative candid Executive and a policy of transparent secrecy now reflected in the Investigatory Powers Act 2016 What the book ultimately demonstrates is that this latest comprehensive statute whilst welcome for its candour represents only the latest manifestation of the British state's policy of ensuring protection of national security by granting powers enabling investigative access to communications and data in transit or at rest irrespective of location

Personal Genome Medicine Michael J. Malinowski, 2023-08-31 Draws from the past and present of medicine in the U S to address the emerging future of personal genome medicine

Kelleher, Brendan Tierney, 2018-04-13 A concise introduction to the emerging field of data science explaining its evolution relation to machine learning current uses data infrastructure issues and ethical challenges The goal of data science is to improve decision making through the analysis of data Today data science determines the ads we see online the books and movies that are recommended to us online which emails are filtered into our spam folders and even how much we pay for health insurance This volume in the MIT Press Essential Knowledge series offers a concise introduction to the emerging field of data science explaining its evolution current uses data infrastructure issues and ethical challenges It has never been easier for organizations to gather store and process data Use of data science is driven by the rise of big data and social media the

development of high performance computing and the emergence of such powerful methods for data analysis and modeling as deep learning Data science encompasses a set of principles problem definitions algorithms and processes for extracting non obvious and useful patterns from large datasets It is closely related to the fields of data mining and machine learning but broader in scope This book offers a brief history of the field introduces fundamental data concepts and describes the stages in a data science project It considers data infrastructure and the challenges posed by integrating data from multiple sources introduces the basics of machine learning and discusses how to link machine learning expertise with real world problems The book also reviews ethical and legal issues developments in data regulation and computational approaches to preserving privacy Finally it considers the future impact of data science and offers principles for success in data science projects

Self-Tracking Gina Neff,Dawn Nafus,2016-06-24 What happens when people turn their everyday experience into data an introduction to the essential ideas and key challenges of self tracking People keep track In the eighteenth century Benjamin Franklin kept charts of time spent and virtues lived up to Today people use technology to self track hours slept steps taken calories consumed medications administered Ninety million wearable sensors were shipped in 2014 to help us gather data about our lives This book examines how people record analyze and reflect on this data looking at the tools they use and the communities they become part of Gina Neff and Dawn Nafus describe what happens when people turn their everyday experience in particular health and wellness related experience into data and offer an introduction to the essential ideas and key challenges of using these technologies They consider self tracking as a social and cultural phenomenon describing not only the use of data as a kind of mirror of the self but also how this enables people to connect to and learn from others Neff and Nafus consider what s at stake who wants our data and why the practices of serious self tracking enthusiasts the design of commercial self tracking technology and how self tracking can fill gaps in the healthcare system Today no one can lead an entirely untracked life Neff and Nafus show us how to use data in a way that empowers and educates **Auctions** Timothy P. Hubbard,Harry J. Paarsch,2016-01-06 How auctions work in theory and practice with clear explanations and real world examples that range from government procurement to eBay Although it is among the oldest of market institutions the auction is ubiquitous in today s economy used for everything from government procurement to selling advertising on the Internet to course assignment at MIT s Sloan School And yet beyond the small number of economists who specialize in the subject few people understand how auctions really work This concise accessible and engaging book explains both the theory and the practice of auctions It describes the main auction formats and pricing rules develops a simple model to explain bidder behavior and provides a range of real world examples The authors explain what constitutes an auction and how auctions can be modeled as games of asymmetric information that is games in which some players know something that other players do not They characterize behavior in these strategic situations and maintain a focus on the real world by illustrating their discussions with examples that include not just auctions held by eBay and Sotheby s but those used by Google the U S

Treasury TaskRabbit and charities Readers will begin to understand how economists model auctions and how the rules of the auction shape bidder incentives They will appreciate the role auctions play in our modern economy and understand why these selling mechanisms are so resilient

Free Will Mark Balaguer, 2014-02-14 A philosopher considers whether the scientific and philosophical arguments against free will are reason enough to give up our belief in it In our daily life it really seems as though we have free will that what we do from moment to moment is determined by conscious decisions that we freely make You get up from the couch you go for a walk you eat chocolate ice cream It seems that we are in control of actions like these if we are then we have free will But in recent years some have argued that free will is an illusion The neuroscientist and best selling author Sam Harris and the late Harvard psychologist Daniel Wegner for example claim that certain scientific findings disprove free will In this engaging and accessible volume in the Essential Knowledge series the philosopher Mark Balaguer examines the various arguments and experiments that have been cited to support the claim that human beings don't have free will He finds them to be overstated and misguided Balaguer discusses determinism the view that every physical event is predetermined or completely caused by prior events He describes several philosophical and scientific arguments against free will including one based on Benjamin Libet's famous neuroscientific experiments which allegedly show that our conscious decisions are caused by neural events that occur before we choose He considers various religious and philosophical views including the philosophical pro free will view known as compatibilism Balaguer concludes that the anti free will arguments put forward by philosophers psychologists and neuroscientists simply don't work They don't provide any good reason to doubt the existence of free will But he cautions this doesn't necessarily mean that we have free will The question of whether we have free will remains an open one we simply don't know enough about the brain to answer it definitively

The True Creator of Everything Miguel Nicolelis, 2020-01-07 A radically new cosmological view from a groundbreaking neuroscientist who places the human brain at the center of humanity's universe Renowned neuroscientist Miguel Nicolelis introduces a revolutionary new theory of how the human brain evolved to become an organic computer without rival in the known universe He undertakes the first attempt to explain the entirety of human history culture and civilization based on a series of recently uncovered key principles of brain function This new cosmology is centered around three fundamental properties of the human brain its insurmountable malleability to adapt and learn its exquisite ability to allow multiple individuals to synchronize their minds around a task goal or belief and its incomparable capacity for abstraction Combining insights from such diverse fields as neuroscience mathematics evolution computer science physics history art and philosophy Nicolelis presents a neurobiologically based manifesto for the uniqueness of the human mind and a cautionary tale of the threats that technology poses to present and future generations
