Conducting Research Surveys Via E Mail And The Web:

Conducting Research Surveys via E-mail and the Web Matthias Schonlau, Ronald D., Jr. Fricker, Marc N. Elliott, 2002-02-15 Internet based surveys although still in their infancy are becoming increasingly popular because they are believed to be faster better cheaper and easier to conduct than surveys using more traditional telephone or mail methods Based on evidence in the literature and real life case studies this book examines the validity of those claims The authors discuss the advantages and disadvantages of using e mail and the Web to conduct research surveys and also offer practical suggestions for designing and implementing Internet surveys most effectively Among other findings the authors determined that Internet surveys may be preferable to mail or telephone surveys when a list of e mail addresses for the target population is available thus eliminating the need for mail or phone invitations to potential respondents Internet surveys also are well suited for larger survey efforts and for some target populations that are difficult to reach by traditional survey methods Web surveys are conducted more quickly than mail or phone surveys when respondents are contacted initially by e mail as is often the case when a representative panel of respondents has been assembled in advance And although surveys incur virtually no coding or data entry costs because the data are captured electronically the labor costs for design and programming can be high

Conducting Research Surveys Via E-Mail and the Web, 2002 Low cost personal computers and the explosive growth of the Internet over the past decade have introduced new methods of conducting research surveys It is now possible to conduct an entire survey solely through the World Wide Web or by e mail But just as issues were raised about phone and mail surveys when they were first introduced many researchers and practitioners are trying to determine the best way to conduct Internet surveys and questioning just how scientifically valid Internet based surveys are This book provides practical information for researchers who are contemplating using the Internet in their survey activities The authors examine the reported strengths and limitations of using the Internet to conduct research surveys and offer guidelines on survey design and implementation This book should be of interest to social science and public policy researchers although it is certainly applicable to any form of survey research including that conducted within the Department of Defense and throughout the armed forces It should also prove useful to principal investigators survey coordinators and survey programmers
