Innovative Developments of Advanced Multifunctional Nanocomposites in Civil and Structural Engineering Kenneth Loh, Satish Nagarajaiah, 2016-02-03 Innovative Developments of Advanced Multifunctional Nanocomposites in Civil and Structural Engineering focuses on nanotechnology the innovation and control of materials at 100 nm or smaller length scales and how they have revolutionized almost all of the various disciplines of science and engineering study In particular advances in synthesizing imaging and manipulating materials at the nano scale have provided engineers with a broader array of materials and tools for creating high performance devices Nanomaterials possess drastically different properties than those of their bulk counterparts mainly because of their high surface to mass ratios and high surface energies reactivity For instance carbon nanotubes have been shown to possess impressive mechanical strength stiffness and electrical conductivity superior to that of bulk carbon Whilst nanotechnology has become deeply rooted in electrical chemical and materials engineering disciplines its proliferation into

civil engineering did not begin until fairly recently This book covers that proliferation and the main challenges associated with the integration of nanomaterials and nano scale design principles into civil and structural engineering Examines nanotechnology and its application to not only structural engineering but also transportation new infrastructure materials and the applications of nanotechnology to existing structural systems Focuses on how nanomaterials can provide enhanced sensing capabilities and mechanical reinforcement of the original structural material Analyzes experimental and computational work carried out by world renowned researchers

growing economies in the world is witnessing transformative changes in terms of public investment private consumption structural reforms leading construction sector to reach 1.4 trillion by 2025. Coupled with rapid urbanization climate change Nationally Determined Contributions (NDCs) in terms of reduction of emission intensity by 30-35% by 2030 to achieve net zero emission by 2070, the business as usual approach for building the urban infrastructure including housing need to be superseded by cutting edge innovative productive technologies nurturing fast track affordable sustainable resilient growth. The ubiquitous conventional construction practices of cast in situ brick mortar RCC construction shall have to be replaced by industrialized building systems comprising of off site construction techniques such as precast concrete construction prefabricated steel construction customized formworks sandwich panels 3D printing PPVC supplemented by digitalization BIM cloud computing construction robotics etc. To bring perceptible changes the way we build Ministry of Housing Urban Affairs MoHUA Govt of India with BMTPC as technical partner conceptualized organized Global Housing Technology Challenge India GHTC India through which 54 new construction systems which are time tested proven globally are identified as potential future building technologies for the country being promoted across the country. The six light house projects were also undertaken under PMAY U to showcase the effectiveness of these systems adapt them for further replication. In order to build capacities and for better outreach wider advocacy amongst building professionals about the new and emerging building materials and technologies for construction MoHUA along with SPA New Delhi BMTPC introduced an online certificate course on Innovative Construction Technologies entitled NAVARITI: New Affordable Validated Research Innovation Technologies for Indian Housing. As regards innovative systems information is available in bits and pieces and there are no textbooks available summarizing all these systems therefore the reading material in form of book for the course was prepared published as first edition of the book. The experts from industry academic institutions research laboratories have contributed various chapters of the book. In addition information from various resources have been collected and compiled in concise form to develop the book. The second edition of the book contains updated information along with few new chapters since the last publication. The book is a collection of technical information available on technologies worldwide and it is the first of its kind on the subject. We are sure it will help the readers to comprehend these innovative systems and implement them in their future construction projects.
