

Front Lines Group
(T) Main control valve, (24) Relief valves.

The same operation occurs when the pedal assembly is rotated backward but in reverse order. The bottom of the attachment stem in the main control valve receives pilot oil pressure and the top of the stem is open to drain.

Two line relief valves (24) control the maximum pressure in the attachment circuit when the attachment control valve stem is in the neutral position. The relief valve pressure is set to $31\text{--}400 \pm 490\text{ kPa}$ ($4550 \pm 70\text{ psi}$).

NOTE: The relief valve setting must be reset to the supplier specification for the attachment being used.

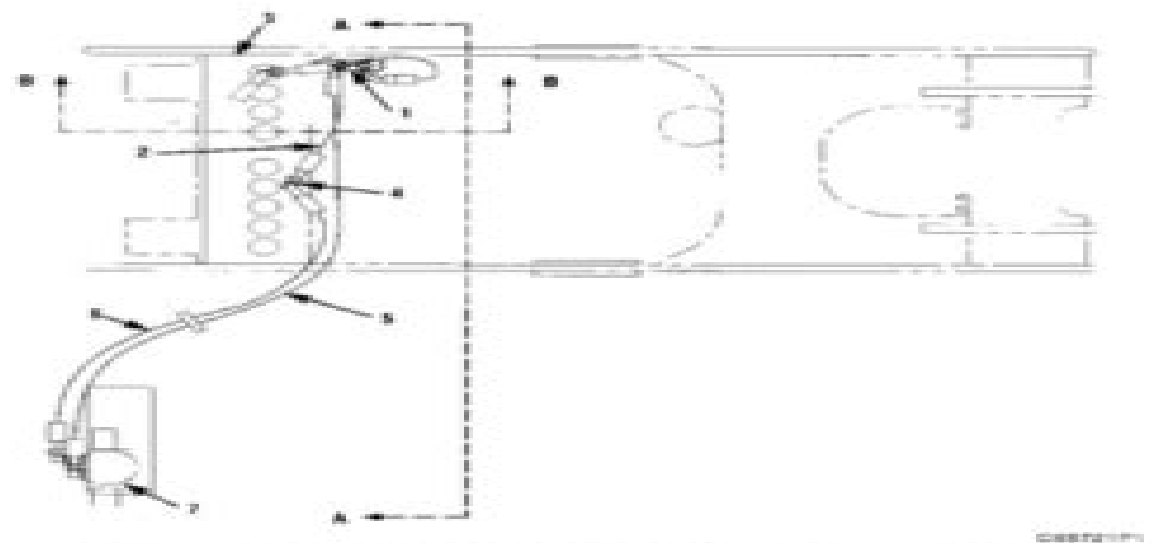

Two Pump Flow

NOTE: For Hydraulic System Two Pump Flow Schematic see SENR6176.

NOTE: This arrangement applies only to the single action one pump arrangement and the double action one pump arrangement.

In the one pump flow system, the attachment circuit oil is supplied by the front (closest to the engine) pump. The two pump flow system allows the attachment circuit to share part or all of the rear pump oil in addition to the front pump oil. This increases the amount of oil flow available to the attachment and reduces the load on the front pump while the attachment is in use. The two pump flow arrangement consists of a front lines group and a pilot lines group.
