 Theory *Educational Research: Why 'What Works' Doesn't Work* Paul Smeyers, Marc Depaepe, 2007-01-07 Education and
 educational research according to the current fashion are supposed to be concerned with what works to the exclusion of all
 other considerations All over the world and particularly in the English speaking countries governments look for means of
 improving student achievement as measured by standardized test scores Although such improvements are often to be
 welcomed they do not answer all significant questions about what constitutes good education Also the research on which
 they are based is not the only legitimate way to do educational research Social research and therefore educational research
 cannot ignore the distinctive nature of what it studies a social activity where questions of meaning and value cannot be
 eliminated and where interpretation and judgment play a crucial role In this book distinguished philosophers and historians
 of education from 6 countries focus on the problematical nature of the search for what works in educational contexts in
 practice as well as in theory Beginning with specific problems they move on to more general and theoretical considerations
 seeking to go beyond over simple ideas about cause and effect and the rhetoric of performativity that currently has
 educational thinking in its grip Freedom of inquiry in educational research can no longer be taken for granted Narrow
 definitions of what constitutes scientific research funding criteria that enforce particular research methods and policy
 decision processes that ignore any research that is not narrowly utilitarian create a context in many countries that
 discourages scholarship of a more speculative exploratory or critical sort This book brings together an exceptional
 combination of international and cross disciplinary scholars who bring the perspectives of history and philosophy of science
 to ask How did we arrive at this place and Where is educational research heading The book illuminates the anti intellectual
 consequences of a what works mentality in education and shows that the ostensibly scientific revolution in educational
 research in fact reflects an ahistorical and conceptually muddled understanding of what actually constitutes science This
 book could not be more timely and important Nicholas C Burbules Grayce Wicall Gauthier Professor University of Illinois
 With research increasingly tied to State policies with the instrumental purpose of guiding school reforms the volume provides
 an important historical and philosophical questioning of the possibilities limitations and challenges of education research
 Internationally leading scholars engage in a significant conversation that is sophisticated and nuanced for understanding
