Computerization Movements and Technology Diffusion Margaret S. Elliott, Kenneth L. Kraemer, 2008

Computerization movement CM refers to a special kind of social and technological movement that promotes the adoption of computing within organizations and society Through theoretical analyses systematic empirical studies field based studies and case studies of specific technologies the book shows CMs to be driven by Utopian visions of technology that become part of the ether within society The empirical studies presented here show the need for designers users and the media to be aware that CM rhetoric can propose grand visions that never become part of a reality and reinforce the need for critical and scholarly review of promising new technologies Back cover

The Comparative Approach to National Movements Alexander Maxwell, 2014-07-16 Miroslav Hroch's Social Preconditions of National Revival has profoundly influenced the study of nationalism since it first appeared in English translation particularly because of its famous three phase model for describing and analyzing national movements in Eastern Europe Contributors to this book explore Hroch's continued relevance to the field of nationalism studies with four case studies and two theoretical historiographic essays Two case studies apply Hroch's thinking to Eastern Europe in light of subsequent historiography finding that Hroch's ideas remain useful for understanding national movements in Belarus and among the Kuban Cossacks Two further studies apply Hroch's schema to the Mexican independence movement and contemporary Pakistan times and places that Hroch specifically excluded from his own considerations The first theoretical contribution seeks to apply Begriffsgeschichte to Hroch's work the second suggests that Hroch's phases form a useful typology of nationalism thus facilitating communication between different branches of nationalism studies Hroch ends the volume with his own commentary on the various contributions This book was published as a special issue of Nationalities Papers

Software Evangelism and the Rhetoric of Morality Jennifer Helene Maher, 2015-08-27 Examining the layers of meaning encoded in software and the rhetoric surrounding it this book offers a much needed perspective on the intersections between software morality and politics In software development culture evangelism typically denotes a rhetorical practice that aims to convert software developers as well as non technical lay users from one platform to another e g from the operating system Microsoft Windows to Linux This book argues that software evangelism like its religious counterpart must also be understood as constructing moral and political values that extend well beyond the boundaries of the development culture Unlike previous studies that locate such values in the effects of code in use or in certain types of code like free and open source FOSS software Maher argues that all code is meaningful beyond its technical executable functions To facilitate this analysis this study builds a theory of evangelism and illustrates this theory at work in the proprietary software industry and FOSS communities As an example of political liberalism at work at the level of code these evangelical rhetorics of software construct competing conceptions of what is good that fall within a shared belief in what is just Maher illustrates how these beliefs in goodness and justice do not always execute in replicable ways as the different ways of decoding software evangelisms in the contexts of Brazil and China reveal Demonstrating how software evangelisms exert a transformative force on the world one comparable in significance to code itself this book highlights the importance of rhetoric in even the most seemingly a rhetorical of technical endeavors and foregrounds the crucial need for rhetorical literacy in the digital age
