Concentration Of Measure For The Analysis Of Randomized Algorithms:

Concentration of Measure for the Analysis of Randomized Algorithms Devdatt Dubhashi, 2009 Randomized algorithms have become a central part of the algorithms curriculum based on their increasingly widespread use in modern applications This book presents a coherent and unified treatment of probabilistic techniques for obtaining high probability estimates on the performance of randomized algorithms It covers the basic toolkit from the Chernoff Hoeffding bounds to more sophisticated techniques like martingales and isoperimetric inequalities as well as some recent developments like Talagrand's inequality transportation cost inequalities and log Sobolev inequalities Along the way variations on the basic theme are examined such as Chernoff Hoeffding bounds in dependent settings The authors emphasise comparative study of the different methods highlighting respective strengths and weaknesses in concrete example applications The exposition is tailored to discrete settings sufficient for the analysis of algorithms avoiding unnecessary measure theoretic details thus making the book accessible to computer scientists as well as probabilists and discrete mathematicians *Handbook of randomized computing. 1* Sanguthevar Rajasekaran, 2001

Handbook of Approximation Algorithms and Metaheuristics Teofilo F. Gonzalez, 2018-05-15 *Handbook of Approximation Algorithms and Metaheuristics* Second Edition reflects the tremendous growth in the field over the past two decades Through contributions from leading experts this handbook provides a comprehensive introduction to the underlying theory and methodologies as well as the various applications of approximation algorithms and metaheuristics Volume 1 of this two volume set deals primarily with methodologies and traditional applications It includes restriction relaxation local ratio approximation schemes randomization tabu search evolutionary computation local search neural networks and other metaheuristics It also explores multi objective optimization reoptimization sensitivity analysis and stability Traditional applications covered include bin packing multi dimensional packing Steiner trees traveling salesperson scheduling and related problems Volume 2 focuses on the contemporary and emerging applications of methodologies to problems in combinatorial optimization computational geometry and graphs problems as well as in large scale and emerging application areas It includes approximation algorithms and heuristics for clustering networks sensor and wireless communication bioinformatics search streams virtual communities and more About the Editor Teofilo F Gonzalez is a professor emeritus of computer science at the University of California Santa Barbara He completed his Ph D in 1975 from the University of Minnesota He taught at the University of Oklahoma the Pennsylvania State University and the University of Texas at Dallas before joining the UCSB computer science faculty in 1984 He spent sabbatical leaves at the Monterrey Institute of Technology and Higher Education and Utrecht University He is known for his highly cited pioneering research in the hardness of approximation for his sublinear and best possible approximation algorithm for k tMM clustering for introducing the open shop scheduling problem as well as algorithms for its solution that have found applications in numerous research areas as well as for his research on problems in the areas of job

Williamson, 2019-09-05 Network flow theory has been used across a number of disciplines including theoretical computer science operations research and discrete math to model not only problems in the transportation of goods and information but also a wide range of applications from image segmentation problems in computer vision to deciding when a baseball team has been eliminated from contention This graduate text and reference presents a succinct unified view of a wide variety of efficient combinatorial algorithms for network flow problems including many results not found in other books It covers maximum flows minimum cost flows generalized flows multicommodity flows and global minimum cuts and also presents recent work on computing electrical flows along with recent applications of these flows to classical problems in network flow theory **On the Power of Small-Depth Computation** Emanuele Viola, 2009 In this work we discuss selected topics on small depth computation presenting a few

unpublished proofs along the way The four sections contain 1 A unified treatment of the challenge of exhibiting explicit functions that have small correlation with low degree polynomials over \mathbb{F}_2 2 An unpublished proof that small bounded depth circuits AC0 have exponentially small correlation with the parity function The proof is due to Klivans and Vadhan it builds upon and simplifies previous ones 3 Valiant's simulation of log depth linear size circuits of fan in 2 by sub exponential size circuits of depth 3 and unbounded fan in To our knowledge a proof of this result has never appeared in full 4 Applebaum Ishai and Kushilevitz's cryptography in bounded depth
