Concept Mapping in Mathematics Karoline Afamasaga-Fuata'i, 2009-04-21 *Concept Mapping in Mathematics Research into Practice* is the first comprehensive book on concept mapping in mathematics. It provides the reader with an understanding of how the meta cognitive tool namely hierarchical concept maps and the process of concept mapping can be used innovatively and strategically to improve planning teaching learning and assessment at different educational levels. This collection of research articles examines the usefulness of concept maps in the educational setting with applications and examples ranging from primary grade classrooms through secondary mathematics to pre service teacher education undergraduate mathematics and post graduate mathematics education. A second meta cognitive tool called vee diagrams is also critically examined by two authors particularly its value in improving mathematical problem solving. Thematically the book flows from a historical development overview of concept mapping in the sciences to applications of concept mapping in mathematics by teachers and pre service teachers as a means of analyzing mathematics topics planning for instruction and designing assessment tasks including applications by school and university students as learning and review tools. This book provides case studies and resources that have been field tested with school and university students alike. The findings presented have implications for enriching mathematics learning and making problem solving more accessible and meaningful for students. The theoretical underpinnings of concept mapping and of the studies in the book include Ausubel's cognitive theory of meaningful learning constructivist and Vygotskian psychology to name a few. There is evidence particularly from international studies such as PISA and TIMSS and mathematics education research which suggest that students mathematical literacy and problem solving skills can be enhanced through students collaborating and interacting as they work discuss and communicate mathematically. This book proposes the meta cognitive strategy of concept mapping as one viable means of promoting communicating and explicating students mathematical thinking and reasoning publicly in a social setting e.g. mathematics classrooms as they engage in mathematical dialogues and discussions. *Concept Mapping in Mathematics Research into Practice* is of interest to researchers graduate students teacher educators and professionals in mathematics education.

Concept Mapping in Mathematics Education, 2006 *Concept Mapping in the Middle School Mathematics Classroom* Kerri A. Bell, 2017 The purpose of the study was to examine the use of concept mapping in the middle school mathematics classroom in conjunction with a procedural task This mixed methods study used a concurrent nested design pulling complementary data from the artifacts to understand what students communicate through concept mapping The maps and task were qualitatively compared for similar information and were quantitatively analyzed for correlation The concept maps were evaluated for relational understandings levels of hierarchy and overall structure The instruments used to examine conceptual understanding were concept maps students created from a provided list of concepts and a procedural task that also served as an end of unit summative assessment for their course The concept maps were scored using a variation of a prominent structural method The concept maps were first analyzed for valid propositions Second the maps were analyzed for structural hierarchies and cross links Third the maps were reviewed for the presence of examples and definitions The maps were then compared to the procedural tasks and examined for similarities and extensions of communicated mathematical understandings The results of the study indicate that although the students in this study did not demonstrate an extension of their knowledge through concept mapping beyond the procedural task the concept maps contained a representation of their gaps in knowledge that could prove helpful for guiding classroom instruction and reteaching The study implies that teachers may find concept maps more effective for formative rather than for summative evaluations

The Creative Enterprise of Mathematics Teaching Research Bronislaw Czarnocha, William Baker, Olen Dias, Vrunda Prabhu, 2016-07-28 The Creative Enterprise of Mathematics Teaching Research presents the results and methodology of work of the teaching research community of practice of the Bronx TR Team of the Bronx It has a twofold aim of impacting both teachers of Mathematics and researchers in Mathematics Education This volume can be used by teachers of mathematics who want to use research to reflect upon and to improve their teaching craft as well as by researchers who are interested in uncovering riches of classroom learning teaching for research investigations This book represents the results of a collaboration of instructors discussing their own instruction research analyzed through a conceptual framework obtained via the synthesis of creativity research and educational learning theories based upon the work of Piaget and Vygotsky The editors see an urgent need for creative synthesis of research and

teaching an example of which is presented in the book Two central themes of the book are the methodology of TR NYCity model and creativity more precisely creativity of the Aha moment formulated by Arthur Koestler 1964 in a very profound but little known theory of bisociation exposed in his work The Act of Creation Incorporation of the theory of bisociation into classroom teaching of mathematics provides the key to enable students who may struggle with mathematics to engage their own creativity become involved in their learning process and thus reach their full potential of excellence Creativity in teaching remedial mathematics is teaching gifted students how to access their own giftedness Concept Mapping, an Educational Tool, and Its Use in a College Level Mathematics Skills Course Leah Mitchell Minemier,1983 **Reading**
