*Great Physics Texts* Kerry Kuehn, 2014-09-15 This book provides a chronological introduction to the sciences of astronomy and cosmology based on the reading and analysis of significant selections from classic texts such as Ptolemy's *The Almagest*, Kepler's *Epitome of Copernican Astronomy*, Shapley's *Galaxies* and Lemaitre's *The Primeval Atom*. Each chapter begins with a short introduction followed by a reading selection. Carefully crafted study questions draw out key points in the text and focus the reader's attention on the author's methods, analysis and conclusions. Numerical and observational exercises at the end of each chapter test the reader's ability to understand and apply key concepts from the text. *The Heavens and the Earth* is the first of four volumes in *A Student's Guide Through the Great Physics Texts*. This book grew out of a four semester undergraduate physics curriculum designed to encourage a critical and circumspect approach to natural science while at the same time preparing students for advanced coursework in physics. This book is particularly suitable as a college level textbook for students of the natural sciences, history or philosophy. It also serves as a textbook for advanced high school students or as a thematically organized source book for scholars and motivated lay readers. In studying the classic scientific texts included herein the reader will be drawn toward a lifetime of contemplation.
