Distance vs. Displacement

- Distance is the total length of travel
 - Measured in meters
- Displacement is the change in position with direction
 - Measured in meters
 - Displacement = final position - initial position
 - $\Delta X = X_f - X_i$

Speed and Velocity

- Average Speed is the total distance over time
 - o Measured in meters per second (m/s)
- Average Velocity is the displacement over total time
 - o Measured in meters per second (m/s)
 - o $V_{avg} = \Delta X / \Delta t = (X_f - X_i) / (t_f - t_i)$
- Instantaneous Velocity is the displacement over time
 - o The velocity at a certain instant of time
 - o Measured in meters per second (m/s)
- Note: When velocity is constant, the average velocity is equal to the instantaneous velocity at any time.

Acceleration

- Average acceleration is the rate of change of velocity with time
 - o Measured in m/s^2
 - o $A_{avg} = \Delta V / \Delta t = (V_f - V_i) / (t_f - t_i)$
- Instantaneous Acceleration is the velocity per time
 - o The acceleration at a certain instant of time
 - o Measured in m/s^2
- Does not depend on mass

Variations of equations:

$$V_{avg} = \frac{1}{2} (V_i + V_f)$$

$$V_f = V_i + at \text{ (when } t_i = 0)$$

$$X_f = X_i + V_i t + \frac{1}{2} at^2$$

$$\Delta X = V_i t + \frac{1}{2} at^2$$

$$V_f^2 = V_i^2 + 2a(X_f - X_i) \leftarrow \text{when don't have time}$$

* Note: When linear equations are vertical, accelerations will always be 9.81 m/s^2 DOWN

- When an object is thrown vertically upward then its speed on returning to its original starting point is the same as its initial speed.

Vectors

- Any quantity that refers to both a magnitude (number) and a direction
 - Displacement and Velocity are examples of vectors
- In projectile launch problems:

Hewitt, 1998 Conceptual Physics Tenth Edition helps readers connect physics to their everyday experiences and the world around them with additional help on solving more mathematical problems Hewitt s text is famous for engaging readers with analogies and imagery from real world situations that build a strong conceptual understanding of physical principles ranging from classical mechanics to modern physics With this strong foundation readers are better equipped to understand the equations and formulas of physics and motivated to explore the thought provoking exercises and fun projects in each chapter Included in the package is the workbook Mechanics Properties of Matter Heat Sound Electricity and Magnetism Light Atomic and Nuclear Physics Relativity For all readers interested in conceptual physics **X+2 BOARD EXAM BASED CONCEPTUAL PHYSICS (Board Exam Made Simple)** L M Garg, 2023-03-15 2008 Physics Education Research Conference Charles Henderson, Mel Sabella, Leon Hsu, 2008-11-21 The 2008 Physics Education Research Conference brought together researchers studying a wide variety of topics in physics education The conference theme was Physics Education Research with Diverse Student Populations Researchers specializing in diversity issues were invited to help establish a dialog and spur discussion about how the results from this work can inform the physics education research community The organizers encouraged physics education researchers who are using research based instructional materials with non traditional students at either the pre college level or the college level to share their experiences as instructors and researchers in these classes **Assessing for Learning** Peggy L. Maki, 2023-07-03 While there is consensus that institutions need to represent their educational effectiveness through documentation of student learning the higher education community is divided

between those who support national standardized tests to compare institutions educational effectiveness and those who believe that valid assessment of student achievement is based on assessing the work that students produce along and at the end of their educational journeys This book espouses the latter philosophy what Peggy Maki sees as an integrated and authentic approach to providing evidence of student learning based on the work that students produce along the chronology of their learning She believes that assessment needs to be humanized as opposed to standardized to take into account the demographics of institutions as students do not all start at the same place in their learning Students also need the tools to assess their own progress In addition to updating and expanding the contents of her first edition to reflect changes in assessment practices and developments over the last seven years such as the development of technology enabled assessment methods and the national need for institutions to demonstrate that they are using results to improve student learning Maki focuses on ways to deepen program and institution level assessment within the context of collective inquiry about student learning Recognizing that assessment is not initially a linear start up process or even necessarily sequential and recognizing that institutions develop processes appropriate for their mission and culture this book does not take a prescriptive or formulaic approach to building this commitment What it does present is a framework with examples of processes and strategies to assist faculty staff administrators and campus leaders to develop a sustainable and shared core institutional process that deepens inquiry into what and how students learn to identify and improve patterns of weakness that inhibit learning This book is designed to assist colleges and universities build a sustainable commitment to assessing student learning at both the institution and program levels It provides the tools for collective inquiry among faculty staff administrators and students to develop evidence of students abilities to integrate apply and transfer learning as well as to construct their own meaning Each chapter also concludes with 1 an Additional Resources section that includes references to meta sites with further resources so users can pursue particular issues in greater depth and detail and 2 worksheets guides and exercises designed to build collaborative ownership of assessment The second edition now covers Strategies to connect students to an institution s or a program s assessment commitment Description of the components of a comprehensive institutional commitment that engages the institution educators and students all as learners Expanded coverage of direct and indirect assessment methods including technology enabled methods that engage students in the process New case studies and campus examples covering undergraduate graduate education and the co curriculum New chapter with case studies that presents a framework for a backward designed problem based assessment process anchored in answering open ended research or study questions that lead to improving pedagogy and educational practices Integration of developments across professional scholarly and accrediting bodies and disciplinary organizations Descriptions and illustrations of assessment management systems Additional examples exercises guides and worksheets that align with new content
