Advances in Bioceramics and Porous Ceramics III Roger Narayan,Paolo Colombo,2010-11-23 This issue contains the proceedings of the Porous Ceramics Novel Developments and Applications and Next Generation Bioceramics symposia which were held on January 24 29 2010 at the Hilton Daytona Beach Resort and the Ocean Center in Daytona Beach Florida USA The interaction between ceramic materials and living organisms is a leading area of ceramics research Novel bioceramic materials are being developed that will provide improvements in diagnosis and treatment of medical and dental conditions In addition bioinspired ceramics and biomimetic ceramics have generated considerable interest in the scientific community The Next Generation Bioceramics symposium addressed several leading areas related to the development and use of novel bioceramics including advanced processing of bioceramics biomineralization and tissue material interactions bioinspired and biomimetic ceramics ceramics for drug delivery ceramic biosensors in vitro and in vivo characterization of bioceramics mechanical properties of bioceramics and nanostructured bioceramics The Porous Ceramics symposium aimed to bring together engineers and scientists in the area of ceramic materials containing high volume fractions of porosity in which the porosity ranged from nano to millimeters These materials have attracted significant academic and industrial attention for use in environmental applications an area where ceramics particularly porous ones play a key role because of their suitable properties Therefore a

significant number of contributions of which some are present in this volume was devoted to the fabrication and characterization of porous ceramics for gas purification e g H₂ separation and CO₂ separation as well as to particulate filtration e g diesel engine soot A leading area of ceramics research involves the development of porous ceramics for medical dental and biotechnology applications For example porous ceramics are under development for use as bone substitutes because a porous structure may enhance tissue ingrowth Therefore tailoring of porosity to give specific characteristics in terms of the amount of interconnecting cells and of the cell and cell window size is required A joint session involving participants from bioceramics and porous ceramics symposia was therefore held in order to stimulate discussion and productive interactions between the two scientific communities
