### Chapter 7. Linkage

- Distinguish independent genes, complete linkage, and incomplete linkage (based on frequencies of gametes or testcross progeny).

| Independent (no linkage)                                                                                                    | Complete Linkage                                                                                                                                    | Incomplete Linkage                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| -4 genetically different gametes in equal proportion.<br>-Each has a different combination of alleles.<br><br>1:1:1:1 ratio | -Two genetically different gametes.<br>-Two parental or non-crossover gametes in equal proportions. -Gene loci are close together.<br><br>1:1 ratio | -Crossing over<br>-Two non-sister chromatids.<br>-New allele combinations<br>-4 different gametes<br>-2 parental in = prop. (together >50%)<br>-2 recombinant (<50%)<br><br>Deviation from 1:1:1:1 |

Number of linkage groups = haploid number of chromosomes.

- Calculate genetic distance and gene order based on recombination frequency.

$R\&F\ (\%) = \frac{\text{Number of recombinants}}{\text{Total number of progeny}} \times 100$

Number of recombinants always sum of 2 numbers.

If >50cM, crossover is expected to occur and behave as independent.

Farther apart: random crossover.

- Distinguish coupling vs. repulsion (allele arrangement, types and frequencies of gametes and testcross progeny). Be able to apply to complete linkage and to incomplete linkage.

| Coupling | Repulsion |
