How to Sell a Poison Elena Conis, 2022-04-12 The story of an infamous poison that left toxic bodies and decimated wildlife in its wake is also a cautionary tale about how corporations stoke the flames of science denialism for profit The chemical compound DDT first earned fame during World War II by wiping out insects that caused disease and boosting Allied forces to victory Americans granted it a hero s homecoming spraying it on everything from crops and livestock to cupboards and curtains Then in 1972 it was banned in the US But decades after that a cry arose to demand its return This is the sweeping narrative of generations of Americans who struggled to make sense of the notorious chemical s risks and benefits Historian Elena Conis follows DDT from postwar farms factories and suburban enclaves to the floors of Congress and tony social clubs where industry barons met with Madison Avenue brain trusts to figure out how to sell the idea that a little poison in our food and bodies was nothing to worry about In an age of spreading misinformation on issues including pesticides vaccines and climate change Conis shows that we

need new ways of communicating about science as a constantly evolving discipline not an immutable collection of facts before it's too late

Human Sciences and Human Interests Mikael Klintman, 2016-08-05 Within the disciplines of social, economic, and evolutionary science, a profound ignorance can often be found of the other areas' approaches. This text provides a novel intellectual basis for breaking this trend. Certainly, Human Sciences and Human Interests aspires to open a broad debate about what scholars in the different human sciences assume, imply, or explicitly claim with regard to human interests. Mikael Klintman draws the reader to the core of human sciences: how they conceive human interests as well as how interests embedded within each discipline relate to its claims and recommendations. Moreover, by comparing theories as well as concrete examples of research on health and environment through the lenses of social, economic, and evolutionary sciences, Klintman outlines an integrative framework for how human interests could be better analysed across all human sciences. This fast-paced and modern contribution to the field is a necessary tool for developing any human scientist's ability to address multidimensional problems within a rapidly changing society. Avoiding dogmatic reasoning, this interdisciplinary text offers new insights and will be especially relevant to scholars and advanced students within the aforementioned disciplines as well as those within the fields of social work, social policy, political science, and other neighbouring disciplines.
