Colonialism as Civilizing Mission Harald Fischer-Tiné,Michael Mann,2004 Inherent in colonialism was the idea of self

legitimation the most powerful tool of which was the colonizer's claim to bring the fruits of progress and modernity to the subject people. In colonial logic people who were different because they were inferior had to be made similar and hence equal by civilizing them. However, once this equality had been attained the very basis for colonial rule would vanish. Colonialism as Civilizing Mission explores British colonial ideology at work in South Asia. Ranging from studies on sport and national education and pulp fiction to infanticide, psychiatric therapy and religion, these essays on the various forms, expressions and consequences of the British civilizing mission in South Asia shed light on a topic that even today continues to be an important factor in South Asian politics.

Further Studies in the History of Construction: the Proceedings of the Third Annual Conference of the Construction History Society James Campbell, Nicholas Bill, Yiting Pan, Nina Baker, Michael Driver, Michael Heaton, Michael Tutton, Christine Wall, David Yeomans, 2016. This book is the third in the series of volumes which provide the papers of the conferences held at Queens College Cambridge by the Construction History Society. Papers cover different aspects of the history of construction including studies of different building materials, building firms, the development and education of building professionals, the construction of buildings and infrastructure, methods and techniques of construction and other subjects related to the history and development of buildings.

Masonry Bridges, Viaducts and Aqueducts Ted Ruddock, 2017-05-15. For 2 000 years the most durable spanning structures have been built of masonry and the surviving bridges of the Roman Empire have challenged master masons, architects and engineers to emulate and surpass them. Down the centuries bridge builders have been commissioned by monarchs, bishops, councils of state, cities, private individuals and more recently waterway and railway companies. The studies collected in this volume focus chiefly on the bridges, viaducts and aqueducts themselves and the actions of the designers and builders, but also encompass the political, economic and social contexts and outcomes of their creation. Famous bridges in Britain, Italy, France, Iran and the USA are all featured. Narratives of conception, design and construction predominate, but there are also papers on construction techniques, on the analysis of documentary sources and on the continuing search by modern engineers for satisfactory scientific description of the strength and stability of arch bridges.
