

2. Control Operation

GENERAL

The following describes the function and operation of the PowerCommand® 1301 Control. All indicators, control buttons and graphical display are located on the face of the control panel as illustrated in Figure 2-2.

CONTROL PANEL POWER ON/OFF MODES

The power on/off modes of the control panel and operating software are Power On and Sleep.

Power On Mode: In this mode, power is continuously supplied to the control panel. The control's operating software and control panel LEDs/graphical display will remain active until the Sleep mode is activated.

Sleep Mode: In the Sleep mode, the control's operating software is inactive and the LEDs and the graphical display on the control panel are all off. Sleep mode is a feature used to reduce battery power consumption when the control is not being used and is in either the Off or Auto mode.

When all conditions are met (i.e., no unacknowledged faults and the control is in the Off or Auto mode) the Sleep mode is activated after five minutes of keypad inactivity.

To activate the control and view the menu display without starting the generator set, press any control button.

When shipped from the factory, Sleep mode is enabled for both modes (Off and Auto mode). Internal adjustment of the control also allows the Sleep mode to be active only during the Off mode (Base board switch **S1**) or disabled for both modes (installation of jumper). When disabled, the operating software will always remain active (Power On mode).

S1 switch setting:

OFF = Sleep mode is enabled for Auto and Off modes.

ON = Sleep mode is enabled for Off mode only.

J1/J2 jumper installation: Install jumper between J1-4 and J1-5 to disable sleep mode. (J1 and J2 are identical, either one can be used for jumper.)

FIGURE 2-1. SLEEP MODE ACTIVATION SETTINGS
