Developing Thinking In Statistics Published In Association With The Open University:

Developing Thinking in Statistics Alan Graham, 2006-03-03 This book should prove to be an important addition to the relatively few publications that exist on statistical thinking. It very nicely encourages the reader to take an active learning approach through simultaneously promoting pedagogy with knowledge and skills enhancement in statistics. Understanding what the subject is for and what it can do are crucial in statistical education by getting the reader to think statistically. Mr Graham has provided us with a very readable book that helps to dispel the poor reputation that statistics has acquired over many years. Professor Neville Davies, Director Royal Statistical Society Centre for Statistical Education, Nottingham Trent University. Statistics is a key area of the school mathematics curriculum where maths and the real world meet. Although potentially a subject where teaching can be motivating and relevant to everyday concerns, it is often seen as boring and involving largely mechanical calculations. This book will enable teachers and others interested in statistical thinking to become excited and inspired by the big ideas of statistics and in turn teach them enthusiastically. Designed to heighten awareness of statistical ideas, the book explores key themes within statistics using ideas developed by the influential team at The Open University's Centre for Mathematics Education. Themes include Measurement, Variation, Randomness, Uncertainty. Arranged in an accessible task-based format, this is an essential text for all secondary maths teachers and students of maths education. It is a comprehensive book that will illuminate and inspire interest in the subject based on innovative use of ICT, engaging narrative, firm research and good practice. *Developing Thinking in Statistics* is a set book on the Open University Course ME626 Developing Statistical Thinking, part of the Graduate Diploma in Mathematics Education.

Developing Thinking in Algebra John Mason, Alan Graham, Sue Johnston-Wilder, 2005-04-23 This book has been constructed in a way that will enable teachers and their support staff to experience and to teach algebraic thinking to pupils aged 7-16. **Using Thinking Skills in the Primary Classroom** Peter Kelly, 2004-12-21 The good practice points add depth to the practical nature of this book and clearly set out its intention to provide reflection for teachers to extend their own skills and practice. Jan Baker, Head Teacher of Orchard Vale Community School. Thoughtfully written and certainly of value to trainee teachers and those already teaching in school. National Association for Gifted Children Newsletter. Most children already display a range of thinking skills when they communicate with each other and when they talk about their interests, whether those are soap operas or car engines, and this book presents an approach for classroom practice that will encourage teachers to build on the often quite sophisticated thinking skills the children in their class already have. The author highlights points for good practice, suggests some lesson ideas and builds in opportunities for professional reflection. Advice on the following is included: classroom organization, approaches to collaborative groupwork, developing children's and teachers' speaking and listening skills, building on the thinking skills that children of all abilities display, using questioning techniques to promote thinking skills in the classroom, whole school issues. Each chapter ends with a summary of key points.
