

5.1-2 Retract stabilizers

Retract the support cylinders individually so that you always have the danger area in view. Lift any wheel supports and lock and secure them properly.

When retracting the outriggers keep the minimum distances listed under 1.3.1.

When retracting the outrigger and support cylinder on the other side you must always have them in your field of vision, otherwise you must change the operating side.

If your crane has stabilizers with a crank handle, rotate it until the stabilizer is totally retracted.

5.1-3 Manually retractable outriggers

Before you are allowed to retract the support cylinders the crane must be in transport position.

- Take out the locking of the outrigger.
- Retract the outriggers.
- Insert the locking pin back into place.
- Check that the locking pin is properly inserted.
- Secure the locking pin with the safety pin.

Outrigger beams if not fully retracted may extend during transport creating a major risk of accident for other road users.

- If the vehicle is equipped with auxiliary outriggers, these must be retracted as well.
- Disengage the hydraulic pump or switch off the power pack. Ensure that the crane cannot be operated by unauthorized persons.

If your crane is equipped with wheel supports these must be fixed after retraction and properly secured.

5.2-1 Securing and transporting the load
