Modelling, Estimation and Control of Networked Complex Systems

Alessandro Chiuso,Luigi Fortuna,Mattia Frasca,Alessandro Rizzo,Luca Schenato,Sandro Zampieri,2009-09-02 The paradigm of complexity is pervading both science and engineering leading to the emergence of novel approaches oriented at the development of a systemic view of the phenomena under study the definition of powerful tools for modelling estimation and control and the cross fertilization of different disciplines and approaches One of the most promising paradigms to cope with complexity is that of networked systems Complex dynamical networks are powerful tools to model estimate and control many interesting phenomena like agent coordination synchronization social and economics events networks of critical infrastructures resources allocation information processing control over communication networks etc Advances in this field are highlighting approaches that are more and more often based on dynamical and time varying networks i.e. networks consisting of dynamical nodes with links that can change over time Moreover recent technological advances in wireless communication and decreasing cost and size of electronic devices are promoting the appearance of large inexpensive interconnected systems each with computational sensing and mobile capabilities This is fostering the development of many engineering applications which exploit the availability of these systems of systems to monitor and control very large scale phenomena with high resolution

Optimal Networked Control Systems with MATLAB Jagannathan Sarangapani,Hao Xu,2018-09-03 Optimal Networked Control Systems with MATLAB discusses optimal controller design in discrete time for networked control systems NCS The authors apply several powerful modern control techniques in discrete time to the design of intelligent controllers for such NCS Detailed derivations rigorous stability proofs computer simulation examples and downloadable MATLAB codes are included for each case The book begins by providing background on NCS networked imperfections dynamical systems stability theory and stochastic optimal adaptive controllers in discrete time for linear and nonlinear systems It lays the foundation for reinforcement learning based optimal adaptive controller use for finite and infinite horizons The text then introduces quantization effects for linear and nonlinear NCS describing the design of stochastic adaptive controllers for a class of linear and nonlinear systems Presents two player zero sum game theoretic formulation for linear systems in input output form enclosed by a communication network Addresses the stochastic optimal control of nonlinear NCS by using neuro

dynamic programming Explores stochastic optimal design for nonlinear two player zero sum games under communication constraints Treats an event sampled distributed NCS to minimize transmission of state and control signals within the feedback loop via the communication network Covers distributed joint optimal network scheduling and control design for wireless NCS as well as the effect of network protocols on the wireless NCS controller design An ideal reference for graduate students university researchers and practicing engineers Optimal Networked Control Systems with MATLAB instills a solid understanding of neural network controllers and how to build them
