Communicative Behavior And Evolution:

Communicative Behavior and Evolution Martin E. Hahn, Edward C. Simmel, 2013-10-22 Communicative Behavior and Evolution presents the selected works of experts from different scientific disciplines that investigate the evolution of communicative behavior The book is composed of papers that study communicative behavior of humans and of different kinds of animals The text contains articles that discuss attempts in the study of behavioral evolution communication and human language the behavior genetic approach systems approach to genetic and selection mechanisms investigation of interspecific communication and learned language in chimpanzees Zoologists ethologists behavioral geneticists and psychologists will find this book highly interesting

The Evolution of Social Communication in Primates Marco Pina, Nathalie Gontier, 2014-05-23 How did social communication evolve in primates In this volume primatologists linguists anthropologists cognitive scientists and philosophers of science systematically analyze how their specific disciplines demarcate the research questions and methodologies involved in the study of the evolutionary origins of social communication in primates in general and in humans in particular In the first part of the book historians and philosophers of science address how the epistemological frameworks associated with primate communication and language evolution studies have changed over time and how these conceptual changes affect our current studies on the subject matter In the second part scholars provide cutting edge insights into the various means through which primates communicate socially in both natural and experimental settings They examine the behavioral building blocks by which primates communicate and they analyze what the cognitive requirements are for displaying communicative acts Chapters highlight cross fostering and language experiments with primates primate mother infant communication the display of emotions and expressions manual gestures and vocal signals joint attention intentionality and theory of mind The primary focus of the third part is on how these various types of communicative behavior possibly evolved and how they can be understood as evolutionary precursors to human language Leading scholars analyze how both manual and vocal gestures gave way to mimetic and imitational protolanguage and how the latter possibly transitioned into human language In the final part we turn to the hominin lineage and anthropologists archeologists and linguists investigate what the necessary neurocognitive anatomical and behavioral features are in order for human language to evolve and how language differs from other forms of primate communication

The Evolution of Language Out of Pre-language Talmy Givón, Bertram F. Malle, 2002-01-01 The contributors to this volume are linguists psychologists neuroscientists primatologists and anthropologists who share the assumption that language just as mind and brain are products of biological evolution The rise of human language is not viewed as a serendipitous mutation that gave birth to a unique linguistic organ but as a gradual adaptive extension of pre existing mental capacities and brain structures The contributors carefully study brain mechanisms diachronic change language acquisition and the parallels between cognitive and linguistic structures to weave a web of hypotheses and suggestive empirical findings on the origins of language and the connections of language to other

human capacities The chapters discuss brain pathways that support linguistic processing origins of specific linguistic features in temporal and hierarchical structures of the mind the possible co evolution of language and the reasoning about mental states and the aspects of language learning that may serve as models of evolutionary change

Reproductive Behavior and Evolution J. Rosenblatt, 2013-06-29 The Daniel S Lehrman Memorial Symposia Series will publish the proceedings of symposia devoted to the evolution development and organization of behavior These various symposia will bring together at intervals scientists studying problems from each of these view points The aim is to attempt to integrate our knowledge derived from these different sources and to familiarize scientists working on similar behavior patterns with the work of their colleagues in related fields of study Each volume therefore will be devoted to a specific topic in the field of animal behavior which will be explored with respect to its evolutionary aspects including the adaptive nature of the behavior with respect to its developmental aspects including neural hormonal and experiential influences and with respect to the analysis of features of organization including motivational perceptual and motor aspects and their physiological bases It is our feeling that the most appropriate memorial to our colleague and close friend Daniel S Lehrman is the continuation of his valuable contributions toward integrating these approaches to the study of animal behavior which he pursued so effectively during his own life Daniel S Lehrman's lifelong love and study of animal behavior gave us a wealth of new insights into reproductive behavior and evolution It is therefore appropriate that the first symposium of this series is devoted to recent advances in this field

Mirror Neurons and the Evolution of Brain and Language Maxim I. Stamenov, Vittorio Gallese, 2002-12-17 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one's own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the

implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B The Cambridge Handbook of Evolutionary Perspectives on Human Behavior Lance Workman, Will Reader, Jerome H. Barkow, 2020-03-19 The transformative wave of Darwinian insight continues to expand throughout the human sciences While still centered on evolution focused fields such as evolutionary psychology ethology and human behavioral ecology this insight has also influenced cognitive science neuroscience feminist discourse sociocultural anthropology media studies and clinical psychology This handbook s goal is to amplify the wave by bringing together world leading experts to provide a comprehensive and up to date overview of evolution oriented and influenced fields While evolutionary psychology remains at the core of the collection it also covers the history current standing debates and future directions of the panoply of fields entering the Darwinian fold As such The Cambridge Handbook of Evolutionary Perspectives on Human Behavior is a valuable reference not just for evolutionary psychologists but also for scholars and students from many fields who wish to see how the evolutionary perspective is relevant to their own work **Evolution of Primate Social Cognition** Laura Desirée Di Paolo, Fabio Di Vincenzo, Francesca De Petrillo, 2018-09-14 This interdisciplinary volume brings together expert researchers coming from primatology anthropology ethology philosophy of cognitive sciences neurophysiology mathematics and psychology to discuss both the foundations of non human primate and human social cognition as well as the means there currently exist to study the various facets of social cognition The first part focusses on various aspects of social cognition across primates from the relationship between food and social behaviour to the connection with empathy and communication offering a multitude of innovative approaches that range from field studies to philosophy The second part details the various epistemic and methodological means there exist to study social cognition in particular how to ascertain the proximal and ultimate mechanisms of social cognition through experimental modelling and field studies In the final part the mechanisms of cultural transmission in primate and human societies are investigated and special attention is given to how the evolution of cognitive capacities underlie primates abilities to use and manufacture tools and how this in turn influences their social ecology A must read for both young scholars as well as established researchers
