Keith D. Cooper, Linda Torczon, 2011-01-18 This entirely revised second edition of *Engineering a Compiler* is full of technical updates and new material covering the latest developments in compiler technology. In this comprehensive text you will learn important techniques for constructing a modern compiler. Leading educators and researchers Keith Cooper and Linda Torczon combine basic principles with pragmatic insights from their experience building state-of-the-art compilers. They will help you fully understand important techniques such as compilation of imperative and object-oriented languages, construction of static single assignment forms, instruction scheduling, and graph coloring register allocation. In-depth treatment of algorithms and techniques used in the front end of a modern compiler. Focus on code optimization and code generation, the primary areas of recent research and development. Improvements in presentation including conceptual overviews for each chapter, summaries and review questions for sections, and prominent placement of definitions for new terms. Examples drawn from several different programming languages.

Compiler Construction Tibor Gyimothy, 1996-04-03 This book presents the refereed proceedings of the Sixth International Conference on Compiler Construction (CC 96) held in Linköping, Sweden, in April 1996. The 23 revised full papers included were selected from a total of 57 submissions. Also included is an invited paper by William Waite entitled *Compiler Construction: Craftsmanship or Engineering*. The book reports the state of the art in the area of theoretical foundations and design of compilers. Among the topics addressed are program transformation, software pipelining, compiler optimization, program analysis, program inference, partial evaluation, implementational aspects, and object-oriented compilers.
