The Information Society Armand Mattelart, 2003-04-03 The impact of the information society are multiform and transdisciplinary There are few areas of social political and economic life that have not been affected or challenged by the new technologies of information and communication In this short introduction Armand Mattelart unpacks the notion of the information society and examines why it has become the dominant paradigm for social change in the 21st Century Critically he also asks why the notion has come to dominant in the absence of any critical examination of the conditions under which it has been produced Combining a long term historical and geopolitical perspective Mattelart questions the axioms used to legitimate the Information Society and critically assesses the ways in which it has been conceptualised as a theoretical concept as well as policy making tool This introduction will be of interest to all students of media and communication as well as social scientists in general

The Early Information Society Alistair Black, Dave Muddiman, 2016-03-23 Whether termed the network society the knowledge society or the information society it is widely accepted that a new age has dawned unveiled by powerful computer and communication technologies Yet for millennia humans have been recording knowledge and culture engaging in the dissemination and preservation of information In *The Early Information Society* the authors argue for an earlier incarnation of the information age focusing upon the period 1900-1960 In support of this they examine the history and traditions in Britain of two separate but related information rich occupations information management and information science repositioning their origins before the age of the computer and identifying the forces driving their early development *The Early Information Society* offers an historical account which questions the novelty of the current information society It will be essential reading for students researchers and practitioners in the library and information science field and for sociologists and historians interested in the information society

Informational Society Alfred L. Norman, 2025-06-17 This book explores the transition into a future economy where human work is largely replaced by automation As this transition takes place job destruction will outpace job creation resulting in increasing unemployment The author theorizes that the key challenges in managing this transition will be providing income for the unemployed reforming a government dominated by the wealthy and corporate interests and creating new social structures to replace work as a central focus of life The book begins with a discussion of the concept of bounded rationality and how it influences the pace of technological adoption The author also discusses how advances in technology particularly in automation affect both physical and informational tasks transforming industries and reducing

employment across sectors Next the author turns to government addressing successes and failures in addressing current issues like climate change immigration economic inequality and government capture by the wealthy and corporations Government reform is essential for managing the social and economic impacts of automation Positing that the transition period will begin between 2030 and 2050 the author recommends that planning should begin now to implement solutions including a negative income tax affordable housing and a shift towards leisure based social organization **Information**
