conflict Russell Hardin offers a timely crucial explanation of group action in its most destructive forms Contrary to those observers who attribute group violence to irrationality primordial instinct or complex psychology Hardin uncovers a systematic exploitation of self interest in the underpinnings of group identification and collective violence Using examples from Mafia vendettas to ethnic violence in places such as Bosnia and Rwanda he describes the social and economic circumstances that set this violence into motion Hardin explains why hatred alone does not necessarily start wars but how leaders cultivate it to mobilize their people He also reveals the thinking behind the preemptive strikes that contribute to much of the violence between groups identifies the dangers of particularist communitarianism and argues for government structures to prevent any ethnic or other group from having too much sway Exploring conflict between groups such as Serbs and Croats Hutu and Tutsi Northern Irish Catholics and Protestants Hardin vividly illustrates the danger that arises when individual and group interests merge In these examples groups of people have been governed by movements that managed to reflect their members personal interests mainly by striving for political and economic advances at the expense of other groups and by closing themselves off from society at large The author concludes that we make a better and safer world if we design our social institutions to facilitate individual efforts to achieve personal goals than if we concentrate on the ethnic political makeup of our respective societies Carmen, and other stories, by prosper merimee translated by guy chapman

other novelists about machines that assume lives of their own or the diagnoses of psychological illness offered by doctors in Maupassant's tales all blur the lines between scientific description and beliefs in the magical Building upon a wealth of critical studies devoted to the fantastic and upon Freud's theory of the unconscious Jutta Fortin proposes that many classic stories of the fantastic undermine basic psychological mechanisms that are designed to help their users cope with shocking or disturbing events By defining five of these defence mechanisms and analyzing stories by eight writers that both illustrate and subvert such mechanisms Dr Fortin offers reasons why fantastic stories appealed to those readers who wished to better understand human motivations BOOK JACKET
