Methods for Studying Nucleic Acid/Drug Interactions Meni Wanunu, Yitzhak Tor, 2016-04-19 Since most therapeutic efforts have been predominantly focused on pharmaceuticals that target proteins there is an unmet need to develop drugs that intercept cellular pathways that critically involve nucleic acids Progress in the discovery of nucleic acid binding drugs naturally relies on the availability of analytical methods that assess the eff

Dynamic Process Modeling, 2013-10-02 Inspired by the leading authority in the field the Centre for Process Systems Engineering at Imperial College London this book includes theoretical developments algorithms methodologies and tools in process systems engineering and applications from the chemical energy molecular biomedical and other areas It spans a whole range of length scales seen in manufacturing industries from molecular and nanoscale phenomena to enterprise wide optimization and control As such this will appeal to a broad readership since the topic applies not only to all technical processes but also due to the interdisciplinary expertise required to solve the challenge The ultimate reference work for years to come

Chemical Relaxation in Molecular Biology I. Pecht, R. Rigler, 2012-12-06 The development of an area of scientific research is a dynamic process with its own kinetic equations and its own physical mechanism The study of fast chemical interactions and transformations is such an area and while it is tempting to draw analogies or to speculate about the simplest model system the lack of adequately averaged observables is an annoying obstacle to such an undertaking Sciences suffering from such conditions usually avoid quantitative models be they primitive or complex Instead they prove their point by case histories Chemical relaxation kinetics started as an offspring of research in acoustics In some aqueous ionic solutions anomalous acoustic absorption had been observed A systematic study traced the cause of this absorption showing that the covered frequency range and the intensity of the absorption were related in a predictable manner to the rate at which ions can interact and form structures differing in volume from the non interacting species The step from this experimental observation and its correct non trivial explanation to the discovery that all fast chemical processes must reveal themselves quantitatively in the relaxation rate of a perturbed equilibrium state and that perturbation parameters other than sound waves can be used for its exploitation was made by MANFRED EIGEN in 1954 The foresightedness of K F
