18. *Comments:* The study is generally conducted in an experimental manner, that is, with a test group of individuals exposed to a particular stimulus (the police stop) and a control group (the police stop that is not conducted in the field). Another practical strength of the study is the fact that the researchers used a random, city-wide sample of individuals. Their findings for this sample, we feel, should be generalizable to the broader population of individuals who are stopped in the field. However, it is unclear to me whether the researchers controlled for confounding variables, such as the location of the stop, the time of day, the weather, etc. It is also unclear whether the researchers controlled for other variables that might be related to the outcome, such as the individual's age, gender, race, etc. It is also unclear whether the researchers controlled for other variables that might be related to the outcome, such as the individual's age, gender, race, etc. It is also unclear whether the researchers controlled for other variables that might be related to the outcome, such as the individual's age, gender, race, etc.

Biography is fundamentally essential, as it not only presents great information, required in the job, it also provides personal and other facts about an author or a person or person or persons, company, others, various subjects, and communities. But in place of Biographies, autobiographies are also common in form. Other important books that help in understanding the world are those of world history, geography, and astronomy. This biography of a young child, especially the Wrights and a description of an airplane, also brings the history and the movements of Biographies together in a comprehensive manner.
