Chemical Signals In Vertebrates 11 Chemical Signals In Vertebrates 11:

Chemical Signals in Vertebrates 11 Jane Hurst, Robert J. Beynon, S. Craig Roberts, Tristram Wyatt, 2007-10-26 This volume contains the proceedings of the conference of the same name held in July 2006 at the University of Chester in the United Kingdom It includes all the latest research on chemical communication relevant to vertebrates particularly focusing on new research since the last meeting in 2003 Topics covered include the chemical ecology biochemistry behavior olfactory receptors and the neurobiology of both the main olfactory and vomeronasal systems of vertebrates **Chemical Signals in**

Vertebrates 10 R.T. Mason, Michael P. Lemaster, Dietland Müller-Schwarze, 2006-11-09 The editors and contributors to this volume should be justifiably proud of their participation in the tenth triennial meeting of the Chemical Signals in Vertebrates International Symposium This meeting was held 27 years after the initial gathering of participants in Saratoga Springs New York from June 6 to 9 1976 Subsequent meetings have been held every three years in Syracuse New York Sarasota Florida Laramie Wyoming Oxford England Philadelphia Pennsylvania Tübingen Germany Ithaca New York and Krakow Poland This tenth anniversary symposium was held from July 29 through August 1 in Corvallis Oregon and was hosted by the Zoology Department and Biology Programs of Oregon State University This book also represents the tenth in a series of books on chemical communication chemical ecology olfactory and vomeronasal research in vertebrate species The species covered in the chapters herein range from fish to mammals including humans By taxonomic breakdown the mammals are the most represented in number of species and chapter contributions However the hosts of the meeting endeavored to have some representative contributions covering all of the major vertebrate taxa As in past years the meeting was well represented with just over 100 participants from 13 different nations Plenary talks focused on some of the non mammalian groups that have tended to be less represented in these symposia Thus we had a very nice overview of comparisons and contrasts of invertebrate chemical communication to vertebrate systems **Chemical Signals in Vertebrates 12**

Marion L East, Martin Dehnhard, 2013-02-26 Three invited international experts present overviews of recent developments in key fields and will submit chapters for the book Jane Hurst from Liverpool University in the UK presents an overview on the function mechanisms and evolution of chemical signals Penelope Hawkins from the University of Western Australia will detail the importance of male odors in female mate choice and the priming of female reproduction and Francesco Bonadonna from CNRS CEFE Montpellier in France presents an overview of the importance of chemical signals for the formation and maintenance of pair bonds parent offspring recognition and navigation in seabirds Select submissions are invited by the scientific committee to contribute chapters **Chemical Signals in Vertebrates 10**

R.T. Mason, Michael P. Lemaster, Dietland Müller-Schwarze, 2005-06-08 This volume is comprised of the proceedings of Chemical Signals in Vertebrates 10 held July 29th through August 1st 2003 at Oregon State University in Corvallis Oregon USA The volume includes the state of the art in chemical signaling among vertebrates Chemical Signals D. Muller-Schwarze, 2012-12-06

Research on chemical communication in animals is in a very active and exciting phase more species are studied data are accumulating concepts are changing and practical application seems feasible While most of the work on chemical ecology and chemical signals deals with insects vertebrate communication provides a formidable challenge and progress has been slow Joint efforts and frequent direct contacts of ecologists behaviorists psychologists physiologists histologists and chemists are required Such an interdisciplinary exchange of information took place on the occasion of the Symposium on Chemical Signals in Vertebrates and Aquatic Animals in Syracuse New York from May 31 to June 2 1979 More than one hundred investigators from seven countries participated and the papers presented comprise this volume Since the first Symposium on Vertebrate Chemical Signals at Saratoga Springs in 1976 considerable progress has been made with field studies the physiology of the vomeronasal organ and its role in reproductive behavior The behavioral functions and chemical nature of priming pheromones are better understood Efforts to isolate and identify mammalian pheromones are gaining ground and the bioassays are becoming more sophisticated In addition to formal presentations one evening of the Symposium was devoted to round table discussions of particular topics The selected themes indicate the growing points of chemical communication research priming pheromones vomeronasal organ bioassay and practical applications

Chemical Signals in Vertebrates 7 Raimund Apfelbach, 1995 This is the seventh in a series of books on chemocommunication and chemical ecology in animals from fish to humans This volume grew out of the Symposium on Chemical Signals in Vertebrates VII hosted in July 1994 in Germany More than 200 scientists from 22 countries contributed to the symposium and this book Expression of olfactory receptors effects of the major histocompatibility complex and of bacteria on semiochemicals are growing points of the young disciplines of chemoreception and chemocommunication studies They are balanced by a strong field of behavior studies in a broad array of taxa Investigations of sensory inputs deal with olfaction vomolfaction taste and terminal nerve The breadth of the topics covered attests to the vigor and importance of the study of chemical signals in vertebrates including of course humans

Chemical Signals in Vertebrates 4 David Duvall, Dietland Müller-Schwarze, Robert M. Silverstein, 2012-12-06 This volume reviews recent developments in our understanding of chemical signaling in vertebrates After sections dealing with general principles and chemical aspects of vertebrate pheromones it follows a taxonomic approach progressing from fish to mammals The editors asked a diverse international group of leading investigators working on a wide array of vertebrate taxa and specific issues to consider their efforts from comparative evolutionary and ecological viewpoints The relative number of manuscripts in each part does not necessarily reflect current intensity of research since the editors invited speakers who together would provide a balanced and comprehensive overview while avoiding duplication Still the part on mammals is the longest Fourth in a series dating from 1977 this volume illuminates current trends and likely future developments in the field of chemical signaling in vertebrates Going back even farther the first chapter a personal account of the past quarter century by Dr Mykytowycz recalls the most important

milestones such as symposia or the founding of societies and journals He also credits those investigators who stand out by their seminal studies Chemical Signals in Vertebrates 9 Anna Marchlewska-Koj, John J. Lepri, Dietland Müller-Schwarze, 2001-12-31 It is generally accepted that the recent progress in molecular and cellular biology would not have been possible without an understanding of the mechanisms and signaling pathways of communication inside the cell and between various cells of the animal organism In fact a similar progress occurred in the field of chemical communication between individual organisms of vertebrate species and this volume is aimed at presenting the current state of the art on this subject The reader can find here both original results obtained in the laboratory or field studies and comprehensive reviews summarizing many years of research The presentations of over 60 scientists have been grouped according to their approach into nine parts covering such fields as ecological and evolutionary aspects of chemical communication structure and neuronal mechanisms of chemosensory systems chemical structure of pheromones and binding proteins kin individual and sexual recognition predator prey relationships purpose and consequences of marking behavior scent signals and reproductive processes Expanding on former volumes of this series entirely new chapters have been added on prenatal chemical communication describing specific effects of the intrauterine environment In many cases a truly multidisciplinary approach was required such as with the population analysis of polymorphic variants of the mouse s major urinary proteins that function in carrying pheromones Chemical Signals in Vertebrates ,1977 **Chemical Signals in Vertebrates 6** R.L. Doty, Dietland Müller-Schwarze, 2013-11-11 This volume is an up to date treatise of chemosensory vertebrate research performed by over 200 scientists from 22 countries Importantly data from over 25 taxa of vertebrates are presented including those from human beings Unlike other volumes on this topic a significant number of the contributions come from leading workers in the former Soviet Union and reflect studies within a wide variety of disciplines including behavior biochemistry ecology endocrinology genetics psychophysics and morphology Most of the studies described in this volume were presented at the Chemical Signals in Vertebrates VI CSV VI symposium held at the University of Pennsylvania in the summer of 1991 This international symposium was the largest and the most recent of a series of six such symposia the first of which was held in Saratoga Springs New York June 6-9 1976 and the last in Oxford England August 8-10 1988 Unlike the previous symposia Chemical Signals in Vertebrates VI lasted a full week reflecting the increased number of participants and the desire of many to present their research findings orally to the group as a whole
