CO2 Biofixation by Microalgae Sihem Tebbani,Rayen Filali,Filipa Lopes,Didier

Dumur,Dominique Pareau,2014-07-09 Due to the consequences of global warming and significant greenhouse gas emissions several ideas have been studied to reduce these emissions or to suggest solutions for pollutant removal The most promising ideas are reduced consumption waste recovery and waste treatment by biological systems In this latter category studies have demonstrated that the use of microalgae is a very promising solution for the biofixation of carbon dioxide In fact these microorganisms are able to offset high levels of CO₂ thanks to photosynthesis Microalgae are also used in various fields food industry fertilizers biofuel etc To obtain an optimal CO₂ sequestration using microalgae their cultivation has to be carried out in a favorable environment corresponding to optimal operating conditions temperature nutrients pH light etc Therefore microalgae are grown in an enclosure i e photobioreactors which notably operate in continuous mode This type of closed reactor notably enables us to reduce culture contamination to improve CO₂ transfer and to better control the cultivation system This last point involves the regulation of concentrations biomass substrate or by product in addition to

conventional regulations pH temperature To do this we have to establish a model of the system and to identify its parameters to put in place estimators in order to rebuild variables that are not measured online software sensor and finally to implement a control law in order to maintain the system in optimal conditions despite modeling errors and environmental disturbances that can have an influence on the system pH variations temperature light biofilm appearance etc Energy Research Abstracts ,1988 *Fossil Free Fuels* Maniruzzaman Bin A. Aziz,KHAIRUL ANUAR KASSIM,WAN AZELEE WAN ABU BAKAR,AMINATON MARTO,Syed Anuar Faua ad Syed Muhammad,2019-10-24 Many approaches have been undertaken to mitigate global climate change including the movement away from fossil fuels Fossil Free Fuels Trends in Renewable Energy examines several key topics such as the utilization of biofuels as a sustainable renewable resource recycling and untapped waste to energy products and other carbon neutral strategies in various industries such as the transportation construction and manufacturing sectors It provides recent updates on the latest technologies modeling design and technical aspects as well as several practical case studies The current world energy scenario is examined and various solutions to larger environmental problems are outlined in terms of the shift to more alternative energy sources Features Minimizes technical jargon in a straightforward style for a wider audience Discusses sustainable options for different industries such as the use of green materials in the construction sector biofuels for transportation and many more Includes numerous illustrations tables and figures to aid in understanding This book serves as a practical reference for engineers researchers environmental consultants working in renewable energy industries and students **Algae Refinery** Sanjeet Mehariya,Pradeep Verma,2023-12-18 Algae Refinery Up and Downstream Processes offers complete coverage of algae refinery including up and downstream processes while proposing an integrated algal refinery for the advancement of existing technologies and summarizing the strategies and future perspectives of algal refinery It provides a concise introduction to the algal science biology technology and application of algae It explains downstream and upstream steps of algal refinery for the production of algal biomass with several social benefits Features Provides various aspects of algal bioprocess including upstream and downstream processes Explains the major research streams of algae structures and their pathways Covers algal based CO2 capture technology Explores the potential applications of algae for socioeconomical benefits Deliberates algal bioremediation approach for clean and sustainable development **Design for Energy and the Environment** Mahmoud M.
