Learning about Data and the Data Cycle

Statistics is the science of conducting studies to collect, organize, present, summarize, analyze, and draw conclusions from data. We use different graphs to display the data we collect to make it easier to analyze and interpret.

The Data Cycle

To understand statistics, we must understand the Data Cycle. The Data Cycle is a four-stage process to collect and analyze data.

When asking questions...

- Ask a question where you expect to get a variety of different numerical answers
- The question has **NOF** (not a yes/no question)
- The question has **NOF** (not a personal question)
- Ask for a...

Analyzing data may include...

- Finding comparisons
- Finding differences
- Recognizing trends
- Finding parts or clusters

Choose a graph that is most helpful to analyze and interpret the data.

- Circle plot
- Stem-and-leaf plot
- Bar graph
- Histogram
- Line graph

Includes important vocabulary like:

- ✓ Statistics
- ✓ Distribution
- ✓ Spread
- ✓ Cluster
- ✓ Range
- ✓ Mode
- ✓ Data Cycle

Stem-and-Leaf Plot

- A stem-and-leaf plot is a type of graph that helps to organize data.
- A stem-and-leaf plot shows the shape and distribution of data as a whole (the shape it shows how the data is spread out or clustered around certain values or ranges).
- A stem-and-leaf plot is better to use when your data has a **LARGER** **range**.

Minutes Walked Per Students During the Weekend

Stem	Leaf
0	6
1	5, 7, 8
2	1, 4, 5, 6
3	1, 3, 7, 7, 7

Understanding a Stem-and-Leaf Plot

- A stem-and-leaf plot uses columns and rows to display **ALL** the data collected.
- Each value is separated into a stem and a leaf (stems represent tens digits and leaves represent ones digits).
- The stems are listed vertically from **least** to **greatest**. No stem can be skipped. (For example, in the stem-and-leaf plot to the left, there is no stem for the value 2, thus 2 is listed but shown as a blank).
- The leaves are listed horizontally, also from **least** to **greatest**, and can be separated by spaces or commas. Every value in the data set is recorded, regardless of the number of repeats (example: the number 62 is represented three times).

Line Plot

- A line plot, also known as a dot plot, is an ordered display of all values in a data set and shows the frequency of that data on a number line.
- A line plot shows the spread of data, to include clusters (groups of data points) and gaps (large spaces between the data).
- This type of graph helps you quickly identify the **mode**, **range**, and any extreme data values.
- This type of graph is better to use when your data has a **SMALLER** **range**.

Number of Books Read

Interpreting this Graph...

- In the line plot above, the number of Xs shows that 10 students provided data.
- The range (also known as the spread) of a data set is the difference between the largest value and the smallest value in the dataset. In the line plot above, the range can be found by subtracting 8 from 17, which is 9.
- The mode of a data set is the value that occurs the most often. The line plot above has two modes, 15 and 16.
- By observing the line plot above, one can see that every student read more than ten books, and most of the students read more than 15 books.

Understanding a Line Plot

- A line plot shows the frequency of a number for the repeated **ALL** data in a set.
- Each mark on the number line represents a single piece of the data.
- The line markers show the marks on the number line represent.
- The horizontal line is labeled with the values that span the range of the data.
- The title of the line plot should contain information you collected. This can help determine how the data on the horizontal line should be organized (the number on the left is about the number of books read. Since each X represents a student, the number indicates the number of students that read the number of books each student read).
