Demystifying Radio Frequency Interference Donald J. Arndt, 2009-05 Interference whether caused by natural sources such as lightning static atmospheric noise temperature inversions or artificial ones other RF wireless transmitters electrical machinery etc has plagued RF wireless communications since the days of Marconi But it has taken on a special urgency as more wireless services especially broadband digital ones come on line new digital services such as WiFi and WiMax are far less tolerant of interference than analog transmission modes like AM and FM radio Because of this a solid knowledge of the causes of RF interference and techniques for mitigating it is becoming vital knowledge for RF wireless professionals This book will explore common sources of interference how to correctly identify the source and how to reduce or eliminate such interference in a very interesting way WiFi and WiMax interference limitation techniques highlighted Covers cutting edge technical approaches to interference reduction Discusses how to negotiate with other users to achieve mutual and reciprocal reductions in levels of interference

4G Wireless Communication Networks Johnson I. Agbinya, Mari Carmen Aguayo-Torres, Ryszard Klempous, 2022-09-01 This book is a detailed compendium of these major advancements focusing exclusively on the emerging broadband wireless communication technologies which support broadband wireless data rate transmissions Several applications of the wireless communication networks including health care underground communication biomedical and bio telemetry systems are detailed in the book

Proceedings of the Conference on Radio Interference Reduction ,1965 [Efficient Estimation and Mitigation for Radio-frequency Interference](#)
Qiaolei Huang,2019 With rapid innovations in Internet of Things IoT and wireless technology more and more consumer electronic devices around the world are now connected to the internet In a small form factor electronic device there are plenty of potential noise sources such as System On Chip SoC high speed traces flexible cables and power converters etc Those noise sources can possibly introduce radio frequency interference RFI issues In this dissertation a transfer function based calculation method is proposed to estimate radio frequency interference RFI problems The derived equations can clearly decompose the RFI problem into two parts the noise source and the coupling transfer function to the antenna The proposed method is validated through numeric simulations and real cellphone experiments Based on this method a novel RFI mitigation method is proposed Through near field scanning of a real product an equivalent dipole moment of the noise source

CPU and DDR3 is reconstructed and the near field components of the victim Wi Fi antenna are measured By determining the relationship between dipole moment and antenna near field the noise source is rotated by a certain angle to reduce RFI New boards with the suggested changes are fabricated and the measured results show a good RFI reduction up to 8 dB compared to original boards Novel machine learning method is also introduced to accurately extract equivalent dipole moments from the near field scanning of a noise source Compared to the conventional least square method the proposed machine learning based method is believed to have a better accuracy Also machine learning based method is more reliable in handling noise in practical applications Abstract page iv
