how `i18n` and `i10n` access can be embedded into your code to design applications that can be localized easily You will be shown how to organize client to server communication and how different HTML5 features can be used in Dart Finally this module will show you how you can store data locally break the storage limit and prevent security issues in your web application The third module is a pragmatic guide that will increase your expertise in writing all kinds of applications including web apps scripts and server side apps It provides rich insights on how to extend your Dart programming skills Altogether this course provides you the power to create powerful applications with Dart without worrying about your knowledge leading to you having to make compromises to the end product This Learning Path has been curated from three Packt products Dart By Example By Davy Mitchell Mastering Dart By Sergey Akopkokhyants Dart Cookbook By Ivo Balbaert Style and approach This is an enticing learning path that starts from the very basics to gradually pick up pace as the story unfolds Each topic is explained with the help of recipes that solves a real world problem involving hands on work thus giving you a deep insight into the world of DART

Extending a dynamic programming language and runtime environment with access control Tessenow, Philipp, Felgentreff, Tim, Bracha, Gilad, Hirschfeld, Robert, 2016-11-09 Complexity in software systems is a major factor driving development and maintenance costs To master this complexity software is divided into modules that can be developed and tested separately In order to support this separation of modules each module should provide a clean and concise public interface Therefore the ability to selectively hide functionality using access control is an important feature in a programming language intended for complex software systems Software systems are increasingly distributed adding not only to their inherent complexity but also presenting security challenges The object capability approach addresses these challenges by defining language properties providing only minimal capabilities to objects One programming language that is based on the object capability approach is Newspeak a dynamic programming language designed for modularity and security The Newspeak specification describes access control as one of Newspeak's properties because it is a requirement for the object capability approach However access control as defined in the Newspeak specification is currently not enforced in its implementation This work introduces an access control implementation for Newspeak enabling the security of object capabilities and enhancing modularity We describe our implementation of access control for Newspeak We adapted the runtime environment the reflective system the compiler toolchain and the virtual machine Finally we describe a migration strategy for the existing Newspeak code base so that our access control implementation can be integrated with minimal effort
