Cours Danalyse De Lecole Royale Polytechnique Part 1 Analyse Algebrique 1821 French Edition:

The Mathematical Writings of Évariste Galois Évariste Galois, Peter M. Neumann, 2011 Before he died at the age of twenty shot in a mysterious early morning duel at the end of May 1832 Evariste Galois created mathematics that changed the direction of algebra This book contains English translations of almost all the Galois material The translations are presented alongside a new transcription of the original French and are enhanced by three levels of commentary An introduction explains the context of Galois work the various publications in which it appears and the vagaries of his manuscripts Then there is a chapter in which the five mathematical articles published in his lifetime are reprinted After that come the testamentary letter and the first memoir in which Galois expounded on the ideas that led to Galois Theory which are the most famous of the manuscripts These are followed by the second memoir and other lesser known manuscripts This book makes available to a wide mathematical and historical readership some of the most exciting mathematics of the first half of the nineteenth century presented in its original form The primary aim is to establish a text of what Galois wrote The details of what he did the proper evidence of his genius deserve to be well understood and appreciated by mathematicians as well as historians of mathematics

Jacques Hadamard Vladimir Gilelevič Maz'â, T. O. Shaposhnikova, 1999 This book presents a fascinating story of the long life and great accomplishments of Jacques Hadamard 1865 1963 who was once called the living legend of mathematics As one of the last universal mathematicians Hadamard's contributions to mathematics are landmarks in various fields His life is linked with world history of the 20th century in a dramatic way This work provides an inspiring view of the development of various branches of mathematics during the 19th and 20th centuries Part I of the book portrays Hadamard's family childhood and student years scientific triumphs and his personal life and trials during the first two world wars The story is told of his involvement in the Dreyfus affair and his subsequent fight for justice and human rights Also recounted are Hadamard's worldwide travels his famous seminar his passion for botany his home orchestra where he played the violin with Einstein and his interest in the psychology of mathematical creativity Hadamard's life is described in a readable and inviting way The authors humorously weave throughout the text his jokes and the myths about him They also movingly recount the tragic side of his life Stories about his relatives and friends and old letters and documents create an authentic and colorful picture The book contains over 300 photographs and illustrations Part II of the book includes a lucid overview of Hadamard's enormous work spanning over six decades The authors do an excellent job of connecting his results to current concerns While the book is accessible to beginners it also provides rich information of interest to experts Vladimir Mazya and Tatyana Shaposhnikova were the 2003 laureates of the Institut de France's Prix Alfred Verdaguer One or more prizes are awarded each year based on suggestions from the Académie française the Académie de sciences and the Académie de beaux arts for the most remarkable work in the arts literature and the sciences In 2003 the award for excellence was granted in recognition of Mazya and Shaposhnikova's book Jacques Hadamard A Universal Mathematician which is both an

historical book about a great citizen and a scientific book about a great mathematician Differential Equations Marcelo Viana, José M. Espinar, 2021-12-30 This graduate level introduction to ordinary differential equations combines both qualitative and numerical analysis of solutions in line with Poincaré's vision for the field over a century ago Taking into account the remarkable development of dynamical systems since then the authors present the core topics that every young mathematician of our time pure and applied alike ought to learn The book features a dynamical perspective that drives the motivating questions the style of exposition and the arguments and proof techniques The text is organized in six cycles The first cycle deals with the foundational questions of existence and uniqueness of solutions The second introduces the basic tools both theoretical and practical for treating concrete problems The third cycle presents autonomous and non autonomous linear theory Lyapunov stability theory forms the fourth cycle The fifth one deals with the local theory including the Grobman Hartman theorem and the stable manifold theorem The last cycle discusses global issues in the broader setting of differential equations on manifolds culminating in the Poincaré Hopf index theorem The book is appropriate for use in a course or for self study The reader is assumed to have a basic knowledge of general topology linear algebra and analysis at the undergraduate level Each chapter ends with a computational experiment a diverse list of exercises and detailed historical biographical and bibliographic notes seeking to help the reader form a clearer view of how the ideas in this field unfolded over time

Fitting Linear Relationships R.W. Farebrother, 2012-12-06 This book is intended for students of mathematical statistics who are interested in the early history of their subject It gives detailed algebraic descriptions of the fitting of linear relationships by the method of least squares L and the related least absolute 2 deviations L and minimax absolute deviations L procedures These traditional linear J fitting procedures are of course also addressed in conventional statistical textbooks but the discussion of their historical background is usually extremely slight if not entirely absent The present book complements the analysis of these procedures given in S M Stigler's excellent work *The History of Statistics The Quantification of Uncertainty before 1900* However the present book gives a more detailed account of the algebraic structure underlying these traditional fitting procedures It is anticipated that readers of the present book will obtain a clear understanding of the historical background to these and other commonly used statistical procedures Further a careful consideration of the wide variety of distinct approaches to a particular topic such as the method of least squares will give the reader valuable insights into the essential nature of the selected topic *Zeitgenossen* Friedrich August Köthe, 1821

Theory of Reproducing Kernels and Applications Saburo Saitoh, Yoshihiro Sawano, 2016-10-14 This book provides a large extension of the general theory of reproducing kernels published by N Aronszajn in 1950 with many concrete applications In Chapter 1 many concrete reproducing kernels are first introduced with detailed information Chapter 2 presents a general and global theory of reproducing kernels with basic applications in a self contained way Many fundamental operations among reproducing kernel Hilbert spaces are dealt with Chapter 2 is the heart of this book Chapter

3 is devoted to the Tikhonov regularization using the theory of reproducing kernels with applications to numerical and practical solutions of bounded linear operator equations In Chapter 4 the numerical real inversion formulas of the Laplace transform are presented by applying the Tikhonov regularization where the reproducing kernels play a key role in the results Chapter 5 deals with ordinary differential equations Chapter 6 includes many concrete results for various fundamental partial differential equations In Chapter 7 typical integral equations are presented with discretization methods These chapters are applications of the general theories of Chapter 3 with the purpose of practical and numerical constructions of the solutions In Chapter 8 hot topics on reproducing kernels are presented namely norm inequalities convolution inequalities inversion of an arbitrary matrix representations of inverse mappings identifications of nonlinear systems sampling theory statistical learning theory and membership problems Relationships among eigen functions initial value problems for linear partial differential equations and reproducing kernels are also presented Further new fundamental results on generalized reproducing kernels generalized delta functions generalized reproducing kernel Hilbert spaces and as well a general integral transform theory are introduced In three Appendices the deep theory of Akira Yamada discussing the equality problems in nonlinear norm inequalities Yamada's unified and generalized inequalities for Opial's inequalities and the concrete and explicit integral representation of the implicit functions are presented **The National Union Catalogs, 1963-**, 1964

Basic Complex Analysis Barry Simon, 2015-11-02 A Comprehensive Course in Analysis by Poincar Prize winner Barry Simon is a five volume set that can serve as a graduate level analysis textbook with a lot of additional bonus information including hundreds of problems and numerous notes that extend the text and provide important historical background Depth and breadth of exposition make this set a valuable reference source for almost all areas of classical analysis Part 2A is devoted to basic complex analysis It interweaves three analytic threads associated with Cauchy Riemann and Weierstrass respectively Cauchy's view focuses on the differential and integral calculus of functions of a complex variable with the key topics being the Cauchy integral formula and contour integration For Riemann the geometry of the complex plane is central with key topics being fractional linear transformations and conformal mapping For Weierstrass the power series is king with key topics being spaces of analytic functions the product formulas of Weierstrass and Hadamard and the Weierstrass theory of elliptic functions Subjects in this volume that are often missing in other texts include the Cauchy integral theorem when the contour is the boundary of a Jordan region continued fractions two proofs of the big Picard theorem the uniformization theorem Ahlfors's function the sheaf of analytic germs and Jacobi as well as Weierstrass elliptic functions **Essentials of Padé Approximants** George A.
