Cell Mechanics Volume 83 Methods In Cell Biology:

Cell Mechanics Yu-Li Wang, Dennis E. Discher, 2007-07-05 Cell mechanics is the field of study that looks at how cells detect modify and respond to the physical properties of the cell environment Cells communicate with each other through chemical and physical signals which are involved in a range of process from embryogenesis and wound healing to pathological conditions such as cancerous invasion Similar principles are also likely to be critical for success in regenerative medicine Cell mechanics is thus central to understanding these principles As cell mechanics draws from the fields of biology chemistry physics engineering and mathematics this book aims not only to provide a collection of research methods but also to develop a common language among scientists who share the interest in cell mechanics but enter the field with diverse backgrounds To this end all of the contributing authors have sought to explain in plain language the nature of the biological problems the rationale for the approaches in addition to the methods themselves In addition to balance practical utility against conceptual advances Cell Mechanics has intentionally included both chapters that provide detailed recipes and those that emphasize basic principles Presents a distinctive emphasis on matrix mechanics and their interplay with cell functions Includes highly significant topics relevant to basic and translational research as well as tissue engineering Emphasizes mechanical input and output of cells

and bioreactor fouling It can also be used to support undergraduate and Masters level teaching courses This is a fascinating book and it is an invaluable resource for understanding particle particle surface adhesion at micro and nano scales I intend to keep one for my future reference and highly recommend it to my students Prof Zhibing Zhang School of Chemical Engineering University of Birmingham UK **Handbook of Imaging in Biological Mechanics** Corey P. Neu, Guy M. Genin, 2014-10-24 Emerging imaging techniques have opened new fronts to investigate tissues cells and proteins Transformative technologies such as microCT scans super resolution microscopy fluorescence based tools and other methods now allow us to study the mechanics of cancer dissect the origins of cellular force regulation and examine biological specimens
