Redei,1998-03-31 The 1 150 pages contain more information than any other comparable book It is not a glossary or dictionary or review because all concepts are explained not just defined or mentioned Covers the latest developments usually missed in textbooks and monographs The broad range of modern genetics of cell and molecular biology biometry etc are included without glossing over the classical foundations The hundreds of simple and clear illustrations are very useful for classroom purposes because they can be drawn on the blackboard or projected on a screen without taking much time to make the crucial points The cross references among the entries tie the contents into an extremely useful comprehensive textbook The concise style leads the reader to the point without verbiage The etymology of the terms is explained The text is not intimidating and it is very easy to read because all the terms are explained within the book Most of the biometrical procedures are presented by worked out examples in a plain form rarely or not found at all in other books It effectively reaches out to non geneticists without compromising high scientific standards Usually the most essential features of a concept are presented at the beginning of the entry and the reader can go as far as she he feels needed about the logic The WEB and e mail addresses of databases and other sources of detailed information are very helpful A well selected list of about 1000 references published mainly in the last couple of years completes the volume The moderate price makes it a best buy and an excellent choice to own for students teachers scientists physicians lawyers and all educated persons who cannot afford an entire library yet wish to be well informed Biochemistry John L. Tymoczko,Jeremy M. Berg,Lubert Stryer,2010 Derived from the classic text originated by Lubert Stryer and continued by John Tymoczko and Jeremy Berg Biochemistry A Short Course offers that bestseller s signature writing style and physiological emphasis while focusing on the major topics taught in a one semester biochemistry course Hair Follicle K. Morioka,2006-03-21 Each and every hair is much more than just the visible shaft there are also associated complex sheath structures of epidermal and dermal origin In the hair follicle cells undergo a variety of differentiation processes mostly depending on their layers and positions therein and electron microscopy reveals a very complex architecture The structure of a particular layer such as Henle s layer of the inner root sheath is not uniform Rather cells drastically change during the course of differentiation By simply comparing electron micrographs of cells of a layer at different degrees of differentiation one can hardly recognize them as belonging to the same layer As readers will see this book contains many superb electron mic graphs from low magni cation panoramic views for orientation to hi power views showing ultrastructural detail Captions and schematic drawings are also very helpful in reading electron micrographs and derstanding the structural detail In this way Dr Morioka has succeeded in dissecting the complex hair follicle at the ultrastructural level
