

Data Communications and Networking

Data Communication is the process of transferring data (message) from one point to another. Data communications refers to the transmission of this digital data between two or more computers and a computer network or data network is a telecommunications network that allows computers to exchange data. The physical connection between networked computing devices is established using either cable media or wireless media. The best-known computer network is the Internet.

Types of Computer Networking

Generally, networks are distinguished based on their geographical span. A network can be as small as distance between your mobile phone and its Bluetooth headphone and as large as the Internet itself, covering the whole geographical world, i.e. the Earth. There are four types of computer network as given below.

- a. PAN
- b. LAN
- c. MAN
- d. WAN

Personal Area Network (PAN): A Personal Area Network or simply PAN, is smallest network which is very personal to a user. This may include Bluetooth enabled devices or infra-red enabled devices.

Local Area Network (LAN): A computer network spanned inside a building and operated under single administrative system is generally termed as Local Area Network. Usually, Local Area Network covers an organization's offices, schools, college/universities etc.

Metropolitan Area Network (MAN): MAN, generally expands throughout a city such as cable TV network. It can be in form of Ethernet, Token-ring, ATM or FDDI.

Wide Area Network (WAN): As name suggests, this network covers a wide area which may span across provinces and even a whole country. Generally, telecommunication networks are Wide Area Network. These networks provides connectivity to MANs and LANs. Equipped with very high speed backbone, WAN uses very expensive network equipment.

recent years there have been many fundamental changes in the architecture of modern data centers. New applications have emerged including cloud computing, big data analytics, real time stock trading and more. Workloads have evolved from a predominantly static environment into one that changes over time in response to user demands, often as part of a highly virtualized, multi-tenant data center. In response to these new requirements, data center networks have also undergone significant change. Conventional network architectures, which use Ethernet access, aggregation and core tiers with a separate storage area network, are not well suited to modern data center traffic patterns. This chapter reviews the evolution from conventional network architectures into designs better suited to dynamic, distributed workloads. This includes flattening the network, converging Ethernet with storage and other protocols, and virtualizing and scaling the network. Effects of oversubscription, latency, higher data rates, availability, reliability, energy efficiency, and network security will be discussed.

Integrity and Internal Control in Information Systems Sushil Jajodia, 1998-10-31. Integrity and Internal Control in Information Systems is a state-of-the-art book that establishes the basis for an ongoing dialogue between the IT security specialists and the internal control specialists so that both may work more effectively together to assist in creating effective business systems in the future. Building on the issues presented in the preceding volume of this series, this book seeks further answers to the following questions: What precisely do business managers need in order to have confidence in the integrity of their information systems and their data? What is the status quo of research and development in this area? Where are the gaps between business needs on the one hand and research development on the other? What needs to be done to bridge these gaps? Integrity and Internal Control in Information Systems contains the selected proceedings of the Second Working Conference on Integrity and Internal Control in Information Systems, sponsored by the International Federation for Information Processing (IFIP) and held in Warrenton, Virginia, USA, in November 1998. It will be essential reading for academics and practitioners in computer science, information technology, business informatics, accountancy, and eDP auditing. **Highlights**

in Practical Applications of Agents, Multi-Agent Systems and Computational Social Science. The PAAMS Collection Antoine Nongillard, Anne-Cécile Caron, Alfonso González-Briones, Alberto Fernández, Dalila Durães, Nada Sharaf, 2025-12-02. This book constitutes the refereed proceedings of the International Workshops on Practical Applications of Agents and Multi-Agent Systems (PAAMS 2025) held in Lille, France, during June 25-27, 2025. The 17 revised full papers presented in this book were carefully reviewed and selected from 32 submissions. PAAMS 2025 presents the following five workshops: Workshop on Adaptive Smart Areas and Intelligent Agents (ASSIA), Workshop on Deep Learning Applications (DeLA), Workshop on Digital Twinning for training purposes in Industry 4.0 (Twin4Train), Industry 4.0 Vision for the Supply of Energy and Materials (Mahdi Sharifzadeh, 2022-05-11). Industry 4.0 Vision for the Supply of Energy and Materials: Explore the impact of Industry 4.0 technologies on the supply chain with this authoritative text written by a leader in his field. In Industry 4.0 Vision for the Supply of Energy and Materials, distinguished researcher and editor Dr. Mahdi Sharifzadeh delivers

thematic analytic and applied discussions of the Industry 4.0 vision for supply chain design and operation. The book compiles all current aspects and emerging notions of Industry 4.0 into clusters of enablers and analytics of Supply Chain 4.0. Their multifaceted and highly interconnected nature is discussed at length as are their diverse range of applications. You will discover uses of these new technologies ranging from the supply of conventional energy networks to renewables, pharmaceuticals and additive manufacturing. You will also learn about their implications for economic prosperity and environmental sustainability. For each sector, this book scrutinizes current industrial practice and discusses developing concepts. Finally, the book concludes with potential future research directions of interest to industry practitioners and academics alike. Readers will also benefit from the inclusion of a thorough introduction to connectivity through wireless communications and remote sensors. An exploration of blockchains and smart contracts as well as robotics and automation and cloud computing. Practical discussions of supply chain analytics including big data, machine learning and artificial intelligence as well as supply chain modeling, optimization and control. A concise treatment of Industry 4.0 applications in supply chain design and operation including the circular economy and the power industry. An analysis of the oil and gas and petrochemical industry, the pharmaceutical industry and additive manufacturing. Perfect for PhD level and Postdoctoral researchers and industrial researchers. *Industry 4.0 Vision for the Supply of Energy and Materials* will also earn a place in the libraries of working professionals with an interest in the quantitative analysis of Supply Chain 4.0 concepts and techniques.

Internet of Vehicles and Computer Vision Solutions for Smart City Transformations Anuj Abraham, Shitala Prasad, Ahmed Alhammadi, Thierry Lestable, Ferdaous Chaabane, 2025-02-19. This book compiles recent research endeavors at the intersection of computer vision (CV) and deep learning for Internet of Vehicles (IoV) applications which are pivotal in shaping the landscape of smart cities. These technologies play instrumental roles in enhancing various facets of urban life encompassing safety, transportation infrastructure management and sustainability. The amalgamation of CV and deep learning within smart cities creates a powerful synergy that fosters safer, more efficient and sustainable urban environments. By harnessing these cutting edge technologies to drive data driven decision making, cities can elevate the quality of life for their inhabitants, mitigate environmental impact and optimize overall urban functionality. Additionally, this compilation provides in depth technical and scientific insights into various facets of artificial intelligence (AI) technologies including forthcoming trends and innovations that are poised to transform smart cities. The book also extends its focus to other areas of smart city development. It explores the application of these technologies in the creation of smart parking solutions, discusses

the role of surveillance for public safety and examines how CV and IoV can be utilized for environmental monitoring The book also delves into urban planning and infrastructure development emphasizing the importance of a data driven approach It sheds light on the social impact of smart cities and the importance of citizen engagement and discusses issues of security and privacy in the context of smart cities The book concludes with a look at future trends and challenges in the field of smart cities Targeted at researchers practitioners engineers and scientists this book is geared toward those engaged in the development of advanced algorithms for future forward smart city applications in computer vision vehicular networking communication technology sensor devices IoT communication vehicular and on road safety data security and services for IoV related devices
