Can Animals Be Moral:

Can Animals Be Moral? Mark Rowlands, 2015-03 Can animals act morally Philosophical tradition answers no and has apparently convincing arguments on its side Cognitive ethology supplies a growing body of empirical evidence that suggests these arguments are wrong This groundbreaking book assimilates both philosophical and ethological frameworks into a unified whole and argues for a qualified yes **Can Animals Be Persons?** Mark Rowlands, 2019-04-23 Can animals be persons Scientific and philosophical consensus supplies a resounding No In this book Mark Rowlands disagrees Not only can animals be persons many of them probably are A person is an individual in which consciousness rationality self awareness and other awareness converge and many animals are such individuals Can Animals be Moral Agents? F. J. Dalzell, 2012

The Routledge Handbook of Animal Ethics Bob Fischer, 2019-12-06 There isn't one conversation about animal ethics Instead there are several important ones that are scattered across many disciplines This volume both surveys the field of animal ethics and draws professional philosophers graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments To that end the volume contains more nonphilosophers than philosophers explicitly inviting scholars from other fields such as animal science ecology economics psychology law environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals The Routledge Handbook of Animal Ethics is composed of 44 chapters all appearing in print here for the first time and organized into the following six sections I Thinking About Animals II Animal Agriculture and Hunting III Animal Research and Genetic Engineering IV Companion Animals V Wild Animals Conservation Management and Ethics VI Animal Activism The chapters are brief and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study The volume covers everything from animal cognition to the state of current fisheries from genetic modification to intersection animal activism It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals **Environmental and Animal Abuse Denial** Tomaž Grušovnik, Karen

Lykke Syse, Reingard Spannring, 2020-11-24 The staggering rate of environmental pollution and animal abuse despite constant efforts to educate the public and raise awareness challenges the prevailing belief that the absence of serious action is a consequence of a poorly informed public In recent decades alternative explanations of social and political inaction have emerged including denialism Challenging the information deficit model denialism proposes that people actively avoid unpleasant information that threatens their established worldviews lifestyles and identities Environmental and Animal Abuse Denial Averting Our Gaze analyzes how people avoid awareness of climate change environmental pollution animal abuse and the animal industrial complex The contributors examine the theory of denialism in regards to environmental pollution and animal abuse through a range of disciplines including social psychology sociology anthropology philosophy cultural history and law *Christ and the Created Order* Zondervan, 2018-05-08 According to the Christian faith Jesus Christ is the ultimate

revelation not only of the nature of God the Creator but also of how God the Creator relates to the created order The New Testament explicitly relates the act of creation to the person of Jesus Christ who is also a participant within creation and who is said by his acts of participation to have secured creation's ultimate redemption from the problems which presently afflict it Christian theology proposes that Jesus Christ the incarnate Word and Wisdom of God the agent in whom the Spirit of God is supremely present among us is the rationale and the telos of all things time space as we experience and explore its nature and all its enigmas matter itself Christology is thus utterly fundamental to a theology of creation as this is unfolded both in Scripture and in early Christian theology For all this the contemporary conversation about science and faith tends to a remarkable degree to neglect the significance of Jesus Christ focusing instead on a generic God of wonder or God of natural theology Such general theism is problematic from the perspective of Christian theology on many levels and has at times led to a more or less deistic theology the impression that God has created the world then largely left it to itself Such a theology is far removed from classical Christian renderings of creation providence redemption and eschatology According to these the theology of creation is not just about remote beginnings or the distant acts of a divine originator Rather the incarnate Jesus Christ is himself remarkably the means and the end for which creation itself exists If we would think aright about our world study it and live within it wisely we must reckon centrally with his significance What might such a bold claim possibly mean and why is Jesus Christ said by Christian theology to be so important for understanding God's overall relationship to the created order What does this importance mean for science Christ and the Created Order addresses these questions by gathering insights from biblical scholars theologians historians philosophers and scientists This interdisciplinary collection of essays reflects on the significance of Jesus Christ for understanding the created world particularly as that world is observed by the natural sciences Contributors to Christ and the Created Order include Marilyn McCord Adams Richard Bauckham Deborah Haarsma Paul Moser Murray Rae James K A Smith Norman Wirzba N T Wright and more [The Routledge Handbook of Philosophy of Animal Minds](#) Kristin Andrews, Jacob Beck, 2017-07-06 While philosophers have been interested in animals since ancient times in the last few decades the subject of animal minds has emerged as a major topic in philosophy The Routledge Handbook of Philosophy of Animal Minds is an outstanding reference source to the key topics problems and debates in this exciting subject and is the first collection of its kind Comprising nearly fifty chapters by a team of international contributors the Handbook is divided into eight parts Mental representation Reasoning and metacognition Consciousness Mindreading Communication Social cognition and culture Association simplicity and modeling Ethics Within these sections central issues debates and problems are examined including whether and how animals represent and reason about the world how animal cognition differs from human cognition whether animals are conscious whether animals represent their own mental states or those of others how animals communicate the extent to which animals have cultures how to choose among competing models and explanations of animal behavior and whether animals are moral agents and or

moral patients The Routledge Handbook of Philosophy of Animal Minds is essential reading for students and researchers in philosophy of mind philosophy of psychology ethics and related disciplines such as ethology biology psychology linguistics and anthropology **Encyclopedia of Business and Professional Ethics** Deborah C Poff,Alex C. Michalos,2023-05-24

This encyclopedia edited by the past editors and founder of the Journal of Business Ethics is the only reference work dedicated entirely to business and professional ethics Containing over 2000 entries this multi volume major research reference work provides a broad based disciplinary and interdisciplinary approach to all of the key topics in the field The encyclopedia draws on three interdisciplinary and over lapping fields business ethics professional ethics and applied ethics although the main focus is on business ethics The breadth of scope of this work draws upon the expertise of human and social scientists as well as that of professionals and scientists in varying fields This work has come to fruition by making use of the expert academic input from the extraordinarily rich population of current and past editorial board members and section editors of and contributors to the Journal of Business Ethics Robot Ethics and the Innovation Economy Jon-Arild Johannessen,2021-06-16 This book provides an authoritative resource on the topic of intelligent robots artificial intelligence and the ethical implications of these revolutionary innovations It examines the moral and ethical problems that arise in relation to the development design and use of intelligent robots which are capable of autonomous or semi autonomous decision making These problems might relate for example to medical robots driverless cars intelligent military drones pedagogical robots police robots legal robots and many others The main question addressed in this book is how we can understand explain and apply the concept of ethics in relation to intelligent robots and artificial intelligence In each chapter the author examines a different aspect of this question The author also questions how we can ensure that intelligent robots are of service to humans and under what conditions intelligent robots could become more ethical than humans The book employs an original approach to examining this cutting edge research question combining different research areas and offers a wealth of practical relevance and real world examples illustrated through vivid case studies With its jargon free approach and a dedicated chapter on relevant concepts at the end this book is also accessible to readers without prior knowledge on intelligent robots and the Fourth Industrial Revolution By providing a general account of this debate and of the consequences of the innovations resulting from these trends the book serves as an important contribution to the discussion and will find a natural readership among scholars and students of the innovation economy and those concerned with the ethical considerations arising in the wake of the Fourth Industrial Revolution **Towards Trustworthy Artificial Intelligent**
