Nagy, Marco Borga, Pastor David Chávez Muñoz, Artur Magnuszewski, 2020-02-14 This book addresses the issue of climate change risks and hazards holistically Climate change adaptation aims at managing climate risks and hazards to an acceptable level taking advantage of any positive opportunities that may arise At the same time developing suitable responses to hazards for communities and users of climate services is important in ensuring the success of adaptation measures But despite this knowledge about adaptation options including possible actions that can be implemented to improve adaptation and reduce the impacts of climate change hazards is still limited Addressing this need the book presents studies and research findings and offers a catalogue of potential adaptation options that can be explored It also includes case studies providing illustrative and inspiring examples of how we can adapt to a changing climate

The Architecture of Survival Erik Trump, Jake Parcell, 2023-09-05 *The Architecture of Survival* Setting and Politics in Apocalypse Films offers a compelling exploration of how popular films and TV series from the past two decades use architectural spaces to comment on socio political issues The authors harness varied theoretical perspectives to demonstrate how through set design these works suggest that certain kinds of architecture support human development community and freedom while other kinds separate us from our fellow humans and make democratic politics impossible The clean lines of modernist design serve in films such as *Contagion* and *Ex Machina* as a metaphor for the sanitized sterile politics that drive disaster In *The Walking Dead* apocalypse survivors favor traditional architectural styles when rebuilding society a choice that symbolically affirms their democratic principles The massive walls and super gentrification as seen in *Elysium* and *Army of the Dead* divide humanity with those on one side wielding illegitimate power Empty streetscapes intensify loneliness alienation and the destruction of civil norms Smart cities offering a blend of high tech surveillance and big data erode social capital and community in *Her* and *Transcendence* The book concludes with a somewhat hopeful glimpse into architecture's potential to mitigate the catastrophic adverse effects of climate change as seen in films like *Zootopia*

Regenerative-Adaptive Design for Sustainable Development Phillip B. Roös, 2020-09-15 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an adaptive pattern language that re-establishes our wholeness with nature and considers the vulnerabilities of a changing landscape The book examines an integral approach to contemporary theories of planning and design that explores the human nature relationship patterns in social and spatial interconnections between people and their natural environments The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia The concluding chapters argues that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these The book is intended for practitioners and academic scholars with interest in

sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation

Global Sustainability, Cultural Perspectives and Challenges for Transdisciplinary Integrated Research Benno Werlen, 2015-05-28 This book offers new perspectives of transdisciplinary research in methodological as well as theoretical respects It provides insights in the two fold bio physical and the socio cultural global embeddedness of local living conditions on the basis of selected empirical studies from Latin America Asia Africa Australia and Europe The theoretical foundations of ecological research and sustainability policies were developed at the end of the nineteenth century They are largely based on investigations of living spaces and the evolution and differentiation of varied life forms This perspective is embedded in the practical and theoretical European problem situations of the past and lacks social and cultural differentiation The transformation of spatial and natural relations as a result of the globalization process is so radical that new theories are needed to solve 21st century ecological problems Moreover in view of the lack of an ontologically sound and promising strategy for transdisciplinary problem solving as well as an acceptable consideration of the power of cultural schemas relating to natural living's interpretations there is a strong need to focus on sustainable social practices habits and routines rather than on predominantly living spaces or eco topes This book elaborates on the transdisciplinary approach by reflecting on the theoretical heritage and a global perspective of sustainability by focusing on the primary role of a social approach in sustainability research and by putting emphasis on cultural dimension of

sustainability It postulates that global sustainability is grounded in a global understanding of our everyday activities
