A New Concept in Layer Based Fractional Crystallization Processes for Fats Kesarin Chaleepa, 2010 *Crystallization and Polymorphism of Fats and Fatty Acids* Nissim Garti, Kiyotaka Satō, 1988

Sonocrystallization of Fats Silvana Martini, 2013-06-28 Sonocrystallization of Fats will summarize the latest research efforts and discoveries in the relatively new area of sonocrystallization of edible lipids Ultrasound has been used extensively in the past to induce the crystallization of molecules Until recently however very little work has been done using power ultrasound to induce the crystallization of edible lipids and understand how the phenomena applies in these systems Power ultrasound is used in fats to induce their crystallization and to generate small crystals which ultimately result in a harder material Since the elimination of trans fats from food products novel processing technologies have been sought to improve the functional properties of low saturated no trans lipids Power ultrasound can be used as a new processing condition to modify the crystallization of fats and tailor their functional properties to specific food uses This Springer Brief will describe

recent research performed in the area of sonocrystallization of fats and the possible application in the food industry An overview of ultrasound theories will be presented at the beginning of the book followed by a brief description of the uses of power ultrasound in the food industry Description of recent research in the area of fat sonocrystallization and detailed information regarding the experimental conditions used such as type of equipment and ultrasound settings will be presented The book will end with a description of the future trends in sonocrystallization of fats in the food industry *Structure and Properties of Fat Crystal Networks, Second Edition* Alejandro G. Marangoni, Leendert H. Wesdorp, 2012-09-25 Lipid science and technology has grown exponentially since the turn of the millennium The replacement of unhealthy fats in the foods we eat and of petroleum based ingredients in the cosmetics we use is a top priority for consumers government and industry alike Particularly for the food industry removing trans fats and reducing saturated fat in foods has produced a major challenge How do we create structure with a minimum amount of structuring material A comprehensive omnibus *Structure and Properties of Fat Crystal Networks Second Edition* clarifies the complex relationship between triglyceride composition of vegetable oils and fats the physicochemical properties of triglycerides in simple and complex model systems their crystallization and melting behavior Furthermore it dives into the implications of these materials on the functional properties in food systems Replacing ingredients optimizing functionality and improving health necessitate the ability to relate the structural organization present in a material to macroscopic properties Revisiting concepts and approaches used in the study of fat crystal networks the second edition includes new developments particularly intermolecular interactions and thoroughly updated analytical methods Succinct clear and complete this book is designed to help students and early career researchers make the study of fats a more focused less frustrating and less expensive endeavor **Physical Properties of Lipids** Alejandro G. Marangoni, Suresh S. Narine, 2002-03-04 Provides in depth coverage of the physical properties of fats and oils Includes surface and rheological characteristics as well as crystallization and phase behavior for improved nutrition and functionality in the design of new food products
